ANALYSIS OF MIXED PAINTS, COLOR PIGMENTS, AND VARNISHES

BY

CLIFFORD DYER HOLLEY, M.S., PH.D.,

*Professor of Industrial Chemistry, North Dakota Agricultural College, and
Chemist on the Staff of the North Dakota Experiment Station. Joint
Author of Paint and Paint Products; and Paints and Their
Composition. Formerly Chemist for the D. B.
Hend Company, Scranton, Pennsylvania*

AND

E. F. LADD, B.S.

*Professor of Chemistry, North Dakota Agricultural College,
State Chemist and Food Commissioner for
North Dakota*

PREFACE.

THIS book was written primarily to meet the needs of the author's own classes in Industrial Quantitative Analysis, and it is given to the public in the belief that there is a demand for a concise work on the analysis of paints and paint products.

Numerous books have been written during the past few years dealing with the subject of Paints, discussing in a general way the properties of the various pigments and their methods of manufacture. But the author is not acquainted with a single work that will serve as a guide to a chemist of ordinary training in taking a can of mixed paint, of practically any shade or tint, making a complete analysis of it and furnishing him sufficient data, derived from a large number of analyses, so that he may interpret the results of his own analysis in a rational manner.

It is the object of the author as far as may be to fill this much felt want, and the methods given in the following pages should be of interest to advanced college students who may wish to inform themselves on methods of paint analysis; to the industrial chemist who has more or less paint work to do; and especially to the young paint chemist who is just starting out in his career.

Each method given in this work has been tested out in the author's laboratory and its working value thoroughly demonstrated. The various analyses given are believed to be representative of the composition of the pigments they illustrate, and it is hoped that they will be of service in enabling the analyst to pass on paint products with fairness to both the manufacturer and the consumer. The

chapters on varnish analysis are admittedly incomplete. Our present literature on varnish, and especially varnish analysis, is meagre, and much of it of a contradictory nature, but the author hopes in the near future to be able to present data that will be of further value to varnish chemists.

In conclusion the author wishes to express his sincere thanks to Commissioner E. F. Ladd for the portion contributed by him, and for his kindly guidance and interest in the entire work; and also to Mr. Clarence E. Kinney, who has assisted in much of the analytical work.

C. D. HOLLEY.

FARGO, N.D. Feb. 19, 1907.

TABLE OF CONTENTS.

PART I.

CHAPTER.	PAGE
I. READY MIXED PAINTS	1
Why Paints Fail; North Dakota Paint Law; Groups of Pigments; Sublimed Lead; Lithopone; Leaded Zinc; Zinc Lead White; Form of Label; Labels that Mislead; Need of Paint Law; Water in Paint; Imitation White Leads; Paints supposed to be White Lead and Zinc; Whitewash; Short Measure and Weights; Relation of Lead to Zinc.	

PART II.

I. ANALYSIS OF MIXED PAINTS	29
1. Preparation of Sample; 2. Separation of the Vehicle from the Pigment; 3. Ratio of Pigment to Vehicle; 4. Typical Analyses of White and Gray Paints; 5. Composition of Colored Paints; 6. Reds; 7. Blues; 8. Yellows; 9. Greens; 10. Browns; 11. Greys and Grays.	
II. ANALYSIS OF THE VEHICLE	36
12. Water, Occurrence; 13. Detection; 14. Estimation; 15. Linseed Oil, Extraction from Paint; 16. Estimation of the Volatile Oils; 17. Specific Gravity; 18. Spot Test; 19. Mineral Oils; 20. Separation of Mineral Oil from Rosin Oil; 21. Cottonseed Oil; 22. Corn Oil; 23. Fish Oil; 24. Rosin and Rosin Oils; 26. Linseed Oil from Inferior Seed; 28. Specifications for Boiled Linseed Oil, Navy Department, 1905.	
III. ANALYSIS OF THE VOLATILE OILS	48
29. Analysis of the Volatile Oils, Identification; 30. Estimation of Petroleum Products; 33. Analyses of Volatile Oils; 34. Excessive Use of Volatile Oils.	

CHAPTER.	PAGE.
IV. SPECIAL METHODS ON OIL ANALYSIS	54
35. Determination of the Iodine Number; 36. Preparation of Reagents; 37. Determination; 38. Iodine Numbers of Various Oils; 39. Determination of the Bromine Absorption of Oils; 40. Table of Bromine Values of Various Oils; 41. Estimation of Rosin in Mixtures of Linseed Oil and Mineral Oil; 42. Volumetrically; 43. Gravimetrically; 44. Determination of Free Fatty Acids in Linseed Oil; 45. Determination of the Saponification Value; 46. Determination of the Flash Point of Linseed Oil; 49. Evaporation Test; 50. Determination of Flash Point and Fire Test of Petroleum Products; 51. Covered Testers; 52. Open Testers; 53. Fire Test; 54. Specifications for Various Oils; 55. Linseed Oil; 56. Deodorized Benzine; 57. Engine Oil; 58. High Pressure Cylinder Oil; 59. Lithographic Varnish; 60. Kerosene Oil; 61. Lard Oil; 62. Sperm Oil; 63. Gasoline.	
V. ANALYSIS OF WHITE LEAD	69
64. Color; 65. Lead Acetate; 66. Opacity; 67. Painting Test; 68. Sandy Lead; 69. Foreign Pigments; 70. Estimation of Carbon Dioxide, Knorr's Apparatus; 72. Scheibler's Apparatus; 75. Typical Analyses of White Leads; 76. Determination of Acetic Acid in White Lead; 78. Analyses of Miscellaneous White Leads; 79. Short Weights of White Lead Packages.	
VI. ANALYSIS OF SUBLIMED LEAD, ZINC OXIDES, AND ZINC-LEAD PIGMENTS	81
Analysis of Sublimed Lead; 80. Lead and Zinc Oxide; 81. Sulphates; 82. Sulphur Dioxide; 83. Composition of Sublimed Lead; 84. Identification and Estimation of Sublimed Lead in Mixtures; 85. Analysis of Zinc Oxides, Leaded Zincs, and Zinc-Lead Whites; 86. Moisture; 87. Sulphur Dioxide; 88. Zinc Sulphate; 89. Insoluble Matter; 90. Lead; 91. Sulphuric Acid; 92. Zinc Oxide; 93. Calculations; 94. Classification: (1) Green Seal and Florence Red Zinc Oxides; (2) New Jersey Zinc Oxides; (3) Mineral Point Zincs; (4) Leaded Zincs;
