## TABLE OF CONTENTS.

PA
st of lilustrations
etter of transmittal
troduction (By Isalah Bowman)
Nature of hydrologic investigations Location and extent of the East St. Louis district.
Manufacturing interests
Acknowledgements
Plan of report
Comming factures (By Togich Downson)
conomic features (By Isaiah Howman)
Determination of sites
Basic points in railroad transportation
Bridge monopoly.
Bridge monopoly.  Transportation rates across the Mississippi
Land values and business facilities
opographic features (By Isaiah Bowman)
Topographic subdivisions
Mississippi flood-plain
Origin and development.
Upland district
Characteristic features
General effect on ground water
Valley development on margin of upland in relation to reservoir sites
Features of the Karst
Sink holes and caves
Combinations of normal and Karst topography
ydrographic features (by Chester A. Reeds
General Streams in arid and humid climates compared
Classification of drainage systems.
Description of drainage systems.
Wood river
Upland section.
Figod plain section
Cahokia creek.
Upland section
Ffood plain section
Prairie du Pont creek
Upland section
Flood plain section
'Mississippi river
Silver and Richland creeks.
cologic features (by Chester A. Reeds)
Introductory note
Geologic formations.
General statementOrdovician
St. Peters sandstone
Stones river limestone.
Trenton limestone. Richmond limestone and shales.
Silurian
Niagara limestone.
Devonian
Mississinnian
Kinderhook shales and sandstones.
Osage limestones
Meramec limestones

## LIST OF ILLUSTRATIONS.

		PLATES.	0200
1.	(a)	Impounded headwater drainage, showing dam and reservoir one and one half miles south of Sparta. Conditions similar to those described on page 10. (b) General view of Karst topography, four miles south of Stelle, showing numerous sink holes and absence of trunk drainage at the surface	10
2.		Artificial drainage of higher obstructed sink hole into lower, having good underground connection. Locality, one mile east of Falling Spring	12
3.	(R)	Upper reservoir of the Waterioo public water system. (b) Falling Spring, showing exit of underground stream at a point half way up the Mississippi bluffs and improvements for the use of the water	42
4.		Map of the East St. Louis district, showing topography, drainage, culture and well locations	120
		Figures.	
1.		Expressing combination of karst and normal topography, two miles south of Burksville station. The stream runs on a small tract of Chester sandstone and disappears in a sink hole as soon as it reaches the karsted St. Louis limestone.	12
2.		Geological section across the southern part of the East St. Louis district, from east to west through Mascoutah, Ill., to Jefferson Barracks, Mo	24
3.		Geological section from east to west across the central part of the East St. Louis district, tweive miles east of Collineville, Ill., to eight miles west of the Mississippi river, through the northern part of St. Louis, Mo.	25
4.		Diagram to show the heterogeneous character of the alluvial deposits, after Todd (Bull. 158, U. S. Geol. Surv.)	27
5.		Cabaret Island and Granite City pumping station of the City Water Co	32
6.		Cone strainer of fine mesh in suction main; City Water Co. of East St. Louis	84
7.		Sand filter employed by the City Water Co. of East St. Louis and Granite City in purifying river water.	36
8.		Section in East St. Louis, showing slope of ground water toward the Mississippi viver.	45
9.		Profile across upland bluffs one mile south of Peters, showing surface of ground water in relation to topography.	41
10.		Edwardsville pumping station, at Poag	66
11.		Pumping station at Alton	70
