WORKS OF
ERVIN S. FERRY
PUBLISHED BY
JOHN WILEY & SONS, Inc.

Practical Pyrometry

This book supplies the industrial need for precise knowledge of temperature, especially where a continuous automatic record of the temperature state extends over an interval of time. vii + 251 pages, 5½ × 8, 73 figures. Cloth, \$1.50 net.

A Handbook of Physics Measurements

Vol. I.—Fundamental Measurements, Properties of Matter and Optics. ix + 251 pages, 5½ × 8, 146 figures. Cloth, \$2.00 net.

Vol. II.—Vibratory Motion, Sound, Heat, Electricity and Magnetism. x + 233 pages, 5½ × 8, 128 figures. Cloth, \$2.00 net.

PREFACE

As stated in the preface to one of the earlier forms in which a part of this book has appeared:

"The aim of the present work is to furnish the student of pure or applied science with a self-contained manual of the theory and manipulation of those measurements in physics which bear most directly upon his subsequent work in other departments of study and upon his future professional career.

"Only those experimental methods have been included that are strictly scientific and that can be depended upon to give good results in the hands of the average student. Although several pieces of apparatus, experimental methods, and derivations of formulæ that possess some novelty appear, our fixed purpose has been to use the standard forms except in cases where an extended trial in large classes has demonstrated the superiority of the proposed innovation.

"It has been assumed that the experiment is rare that should be performed before the student understands the theory involved and the derivation of the formula required. Consequently the theory of each experiment is given in detail and the required formula developed at length. The more important sources of error are pointed out, and means are indicated by which these errors may be minimized or accounted for.

The book is designed to be commenced during the second college year. The greater part of the experiments requires no mathematics beyond trigonometry and college algebra. But wherever the calculus methods would result in economy of time and mental effort they have been employed.

No student except one specializing in physics would perform all 108 experiments included in the two volumes. Other students, after performing the necessary experiments on the properties of matter, would limit themselves to the groups bearing directly upon

their principal study. Thus, few technical students except those of electrical engineering would do the work on damped vibration and harmonic analysis; few except those of chemical engineering would do the work on indices of refraction, polarimetry, and quantitative spectrum analysis.

CONTENTS

VOLUME I

CHAPTER I

GENERAL NOTIONS REGARDING PHYSICS MEASUREMENTS

ART.	PAGE
1. Introductory	1
2. Errors	2
3. Trustworthy Figures	4
4. Required Accuracy of Measurement	6
5. Approximate Formulse	8
6. Methods of Expressing Results	8
7. The Graphical Representation of Results	8
8. Laboratory Rules and Procedure	10

CHAPTER II

FUNDAMENTAL MEASUREMENTS AND THE PROPERTIES OF MATTER

9. The Measurement of Distance	12
10. The Meter Stick	12
11. The Micrometer Screw	12
12. The Eyepiece Micrometer	15
13. The Vernier Scale	15
14. The Cathetometer	18
15. Amsler's Planimeter	19
16. The Beam Balance	25
17. The Method of Vibrations	26
18. Sensitivity	28
19. Errors in Weighing	30
20. Precautions in the Use of a Balance	31
21. Density and Specific Gravity	32
22. Friction	33
23. Moment of Inertia	33
24. Elasticity	34
25. Viscosity	36

	PAGE
<i>Experiment 1.</i> — Study of the Vernier.....	37
<i>Experiment 2.</i> — Study of the Sensitivity of a Balance.....	37
<i>Experiment 3.</i> — Determination of the Mass of a Body from a Weighing Reduced to Vacuo.....	41
<i>Experiment 4.</i> — Determination of the Density of a Solid by Measurement and Weighing.....	42
<i>Experiment 5.</i> — Determination of the Density and Specific Gravity of a Liquid with a Pyknometer.....	43
<i>Experiment 6.</i> — Determination of the Density and Specific Gravity of a Solid with a Pyknometer.....	45
<i>Experiment 7.</i> — Determination of the Density and Specific Gravity of a Solid by Immersion.....	46
<i>Experiment 8.</i> — Determination of the Specific Gravity of a Liquid with the Mohr-Westphal Balance.....	48
<i>Experiment 9.</i> — Calibration of an Hydrometer of Variable Im- mersion.....	51
<i>Experiment 10.</i> — Determination of the Correction Factor of a Planimeter.....	55
<i>Experiment 11.</i> — Correction for Eccentricity in the Mounting of a Divided Circle.....	56
<i>Experiment 12.</i> — Radius of Curvature and Sensitivity of a Spirit Level.....	58
<i>Experiment 13.</i> — The Acceleration due to Gravity by Means of a Simple Pendulum.....	62
<i>Experiment 14.</i> — Determination of the Speed of a Projectile by the Ballistic Pendulum.....	67
<i>Experiment 15.</i> — Determination of the Coefficient of Kinetic Friction between a Pulley and an Unlubricated Shaft.....	69
<i>Experiment 16.</i> — Determination of the Coefficient of Kinetic Friction between a Lubricated Journal and its Bearings.....	70
<i>Experiment 17.</i> — Determination of the Coefficient of Kinetic Friction between Two Plane Surfaces.....	73
<i>Experiment 18.</i> — Determination of the Moment of Inertia of a Rigid Body by the Rotation Method.....	76
<i>Experiment 19.</i> — Determination of the Moment of Inertia of a Rigid Body by the Vibration Method.....	79
<i>Experiment 20.</i> — Determination of the Tensile Coefficient of Elasticity, or Young's Modulus, by Stretching.....	81
<i>Experiment 21.</i> — Determination of the Tensile Coefficient of Elasticity, or Young's Modulus, by Bending.....	84
<i>Experiment 22.</i> — Koenig's Method for the Determination of Young's Modulus of a Rod by Bending.....	89
<i>Experiment 23.</i> — Determination of the Simple Rigidity of a Wire, or Rod, by the Static Method.....	91
