PREFACE.

IN publishing the Science Primers on Physics and Chemistry, the object of the Authors has been to state the fundamental principles of their respective sciences in a manner suited to pupils of an early age. They feel that the thing to be aimed at is not so much to give information, as to endeavour to discipline the mind in a way which has not hitherto been customary, by bringing it into immediate contact with Nature herself. For this purpose a series of simple experiments has been devised, leading up to the chief truths of each science. These experiments must be performed by the teacher in regular order before the class. The power of observation in the pupils will thus be awakened and strengthened; and the amount and accuracy of the knowledge gained must be tested and increased by a thorough system of questioning.

The study of the Introductory Primer will, in most cases, naturally precede that of either of the above-named subjects; and then it will probably be found best to take Chemistry as the second and Physics as the third stage.

The whole of the apparatus needed for all the experiments (except a few marked in the text with an asterisk) will be supplied by Messrs. J. J. Griffin and Sons, 22, Garrick Street, Covent Garden, London, W.C., for £19 3s. 8d. exclusive of packing.

If prompt payment be made, Messrs. Griffin are willing to supply the set for £17 exclusive of packing cases, which may be either 9s. or 21s. according to quality. Those who have already purchased the apparatus for the Chemical Primer need not purchase another Grove's battery, and in this case they must make their own arrangement with Messrs. Griffin.

TABLE OF CONTENTS.

INTRODUCTION.		
	ART.	PAGE
Definition of Physics	1	1
" of Motion	2	2
" of Force	3	4
THE CHIEF FORCES OF NATURE.		
Definition of Gravity	4	7
" of Cohesion	5	8
" of Chemical Attraction	6	9
Uses of these three Forces	7	10
HOW GRAVITY ACTS.		
Centre of Gravity	8	11
The Balance	9	13
THE THREE STATES OF MATTER.		
General Remarks	10	14
Definition of Solids	11	16
" of Liquids	12	16
" of Gases	13	16
PROPERTIES OF SOLIDS.		
General Remarks on Cohesion	14	16
Bending	15	19
Strength of Materials	16	20
Friction	17	20
PROPERTIES OF LIQUIDS.		
Liquids keep their size though not their shape	18	21
They communicate pressure	19	21
Water-press explained	20	23
Liquids find their level	21	24

TABLE OF CONTENTS.

vii

	ART.	PAGE
Water-level and Spirit-level	22	25
Pressure of deep Water	23	26
Buoyancy of Water	24	28
Flotation in Water	25	30
Comparative Density or Specific Gravity	26	31
Buoyancy of other Liquids	27	32
Capillarity	28	33

PROPERTIES OF GASES.

Pressure of Air	29	34
Weight of Air	30	35
Barometer explained—Mercurial Column	31	38
Uses of the Barometer	32	40
Air-pump explained	33	41
Water-pump explained—limits of working	34	43
Syphon described	35	46

MOVING BODIES.

Definition of Energy	36	47
" of Work	37	48
Work done by a moving body	38	49
Energy in repose	39	50

VIBRATING BODIES.

Sound explained	40	52
What is Noise and what Music	41	53
Sound can do work	42	54
It requires a medium (Air) to carry it	43	54
Its mode of motion through the Air	44	54
Its rate of motion	45	56
Echoes or reflection of Sound	46	57
How to find the number of vibrations in one second corresponding to any note	47	59

HEATED BODIES.

Nature of Heat (first notice)	48	61
Expansion of bodies generally when heated	49	63
Thermometer described	50	65
How to make a Centigrade Thermometer	51	66
Expansion of Solids	52	69
" of Liquids	53	70

	ART.	PAGE
Expansion of Gases	54	70
Remarks on Expansion	55	71
Specific Heat	56	72
Change of state, with table of melting-points	57	72
Latent heat of Water	58	75
" of Steam	59	76
Ebullition and Evaporation	60	78
Boiling-point depends on pressure	61	79
Other effects of Heat	62	81
Freezing mixtures	63	82
Distribution of Heat—General statement	64	83
Conduction of Heat	65	85
Convection of Heat	66	86
Radiant Light and Heat—General statement	67	89
Velocity of Light, how discovered	68	89
Reflection of Light, laws of	69	91
Refraction or bending of Light	70	95
Lenses and Images given by them	71	97
Magnifying-glasses and Telescopes	72	99
Different bending of different rays	73	100
Recapitulation	74	102
Nature of Heat (second notice)	75	103
ELECTRIFIED BODIES.		
Conductors and Non-conductors	76	106
Two kinds of Electricity—their mutual action	77	107
They exist combined in unexcited bodies	78	109
Action of excited on unexcited bodies	79	110
The Electric Spark	80	111
Sundry Experiments—Electroscope	81	112
Action of Points	82	113
Electrical Machine described	83	115
Leyden Jar described	84	117
Energetic nature of Electrified Bodies	85	119
Electric Currents	86	119
Grove's Battery described	87	121
Properties of Current; heating, chemical, and mag- netic effects	88	122
Electric Telegraph	89	125
Concluding Remarks	90	126
THINGS TO BE REMEMBERED		128
INSTRUCTIONS REGARDING APPARATUS		130
LIST OF APPARATUS		133
