PREFACE.

FROM many cases of diseases of the larynx which have come under my notice, I have had an opportunity of observing that the laryngoscope is still but little used in the ordinary routine of medical practice.

And it appears to me that existing separate works on the instrument, notwithstanding their great literary value, are so elaborate as to induce an idea in the student that this really simple aid to diagnosis and treatment is complex in its application and exacts tedious practice before it can be employed fruitfully.

I have, therefore, written this treatise, in which I have tried to include, in a brief space, all the literary instruction strictly necessary, as far as handling the instrument is concerned, to practical laryngoscopy.

G. H.

27A, FINSBURY SQUARE, E.C.,
May, 1881.

CONTENTS.

CHAPTER I.

DESCRIPTION OF THE INSTRUMENT.

	PAGE
INVENTION	1
THE LARYNGEAL MIRROR	2
Its construction, size, etc.	
THE ILLUMINATING APPARATUS	4
Reflected light: the facial reflector. The source of light: adjusting lamps—Direct light: ordinary lamp: oxy- hydrogen lamp: sunlight.	

CHAPTER II.

THE PRACTICE OF LARYNGOSCOPY.

MANAGEMENT OF THE ILLUMINATING APPARATUS	12
Position of patient, laryngoscopist, and lamp—Throwing the light with the reflector—Laryngoscopy at the bedside— Method of using direct light.
