"An undevout philosopher is mad."

PHILADELPHIA: CLAXTON, REMSEN & HAFFELFINGER, 624, 626 & 628 MARKET STREET. 1874. Entered, according to Act of Congress, in the year 1874, by CLAXTON, REMSEN & HAFFELFINGER,

in the Office of the Librarian of Congress at Washington.

#### Arhuowledgment.

THROUGH the kindness, and liberality, of Professor Joseph Henry, Secretary of the Smithsonian Institution, we have been permitted to take electrotype copies of numerous wood-cuts, originally prepared for its own publications.\*—In this way, we have been enabled, fully to illustrate the present work—an advantage which would, otherwise, have been unattainable, on account of the cost.

 The figures of Unionida were drawn from nature, and cut especially for the present purpose.

#### PREFACE.

THE idea has been long entertained, of collecting the Natural Productions of Chester County, with special reference to the elucidation of its Prospective History. With this object in view, The Cabinet of Natural Science of Chester County was organized, in the year 1826. From that time forward, several of its members engaged, with ardor, in the work. But it was soon discovered that the field for research was too ample—the labor too great—the laborers too few, for this desideratum to be speedily attained. Yet, much has been accomplished.

The indefatigable industry, and scientific acumen, of the late Doctor William Darlington, has left little more to be done, in Phanogamous and Filicoid Botany, within our limits. His little FLORULA CASTRICA appeared in 1826. It was followed, eleven years after, by the more extended, and complete, FLORA CASTRICA. This was greatly enlarged, and improved, in a third edition, in 1853. It was also rendered more comprehensive, by the addition of the remaining Anophyta (the Mosses and Liverworts) furnished by Thomas P. James; and the Thallophyta (the Lichens and Collemas) by Dr. E. Michener.

More recently, the last named gentleman has collected, and arranged, an extensive herbarium of *Hysterophyta* (he *Fungi*), a large proportion of which were in the county.

Thirty years ago, Dr. E. Michener collected, and preserved, specimens of most of the Mammalia, Birds, and Reptiles, known to inhabit Chester County. More recently, Vincent Bernard successfully occupied the same field. These important collections have mostly been placed in the Cabinet of Swarthmore College.

The proverbial richness of our county, in rare and valuable minerals, is amply sustained, and illustrated, by the splendid Mineralogical Cabinets of William W. Jefferis, and other savans.

Last, but not least; in 1853, Dr. William D. Hartman prepared "A Descriptive Catalogue of the Terrestrial, and Fluviatile, Testaceous Mollusks, of Chester County," containing fifty-nine species. The cost of printing prevented the publication at that time of more than "A Classified Catalogue" of the species.

More than a duplication of the number of species then known to inhabit the county, and the progressive improvements in classification and nomenclature, have rendered that Catalogue obsolete, and imperiously calls for one more in accordance with the advanced state of the science. Our wish, and desire, is to supply this want. And we entertain the hope that our effort will be received with indulgence; and, that it may serve to diffuse a taste for, and facilitate the study of, this interesting branch of our rich Fauna Cestrica among our young naturalists.

A few extra-limital species have been inserted, from the eastern slope of the mountain range, in our State; and which may yet occur within this county.
