CONTENTS

REASON IN ART

CHAPTER I

THE BASIS OF ART IN INSTINCT AND EXPERIENCE

Man affects his environment, sometimes to good purpose.—Art is plastic instinct conscious of its aims.—It is automatic.—So are the ideas it expresses.—We are said to control whatever obeys us.—Utility is a result.—The useful naturally stable.—Intelligence is docility.—Art is reason propagating itself.—Beauty an incident in rational art, inseparable from the others Pages 3-17

CHAPTER II

RATIONALITY OF INDUSTRIAL ART

Utility is ultimately ideal.—Work wasted and chances missed.—Ideals must be interpreted, not prescribed.—The aim of industry is to live well.—Some arts, but no men, are slaves by nature.—Servile arts may grow spontaneous or their products may be renounced.—Art starts from two potentialities: its material and its problem.—Each must be definite and congruous with the other.—A sophism exposed.—Industry prepares matter for the liberal arts.—Each partakes of the other Pages 18-33

CHAPTER III

EMERGENCE OF FINE ART

Art is spontaneous action made stable by success.—It combines utility and automatism.—Automatism fundamental and irresponsible.—It is tamed by contact with the world.—The dance.—Functions of gesture.—Automatic music Pages 34-43

CHAPTER IV

MUSIC

Music is a world apart.—It justifies itself.—It is vital and transient.—Its physical affinities.—Physiology of music.—Limits of musical sensibility.—The value of music is relative to them.—Wonders of musical structure.—Its inherent emotions.—In growing specific they remain unearthly.—They merge with common emotions, and express such as find no object in nature.—Music lends elementary feelings an intellectual communicable form.—All essences are in themselves good, even the passions.—Each impulse calls for a possible congenial world.—Literature incapable of expressing pure feelings.—Music may do so.—Instability the soul of matter.—Peace the triumph of spirit.—Refinement is true strength.

Pages 44-67

CHAPTER V

SPEECH AND SIGNIFICATION

Sounds well fitted to be symbols.—Language has a structure independent of things.—Words, remaining identical, serve to identify things that change.—Language the dialectical garment of facts.—Words are wise men's counters.—Nominalism right in psychology and realism in logic.—Literature moves between the extremes of music and denotation.—Sound and object, in their sensuous presence, may have affinity.—Syntax positively representative.—Yet it vitiates what it represents.—Difficulty in subduing a living medium.—Language foreshortens experience.—It is a perpetual mythology.—It may be apt or inapt, with equal richness.—Absolute language a possible but foolish art Pages 68-86

CHAPTER VI

POETRY AND PROSE

Force of primary expressions.—Its exclusiveness and narrowness.—Rudimentary poetry an incantation or charm.—Inspiration irresponsible.—Plato's discriminating view.—Explosive and pregnant expression.—Natural

history of inspiration.—Expressions to be understood must be recreated, and so changed.—Expressions may be recast perversely, humourously, or sublimely.—The nature of prose.—It is more advanced and responsible than poetry.—Maturity brings love of practical truth.—Pure prose would tend to efface itself.—Form alone, or substance alone, may be poetical.—Poetry has its place in the medium.—It is the best medium possible.—Might it not convey what it is best to know?—A rational poetry would exclude much now thought poetical.—All apperception modifies its object.—Reason has its own bias and method.—Rational poetry would envelop exact knowledge in ultimate emotions.—An illustration.—Volume can be found in scope better than in suggestion Pages 87-115

CHAPTER VII

PLASTIC CONSTRUCTION

Automatic expression often leaves traces in the outer world.—Such effects fruitful.—Magic authority of man's first creations.—Art brings relief from idolatry.—Inertia in technique.—Inertia in appreciation.—Adventitious effects appreciated first.—Approach to beauty through useful structure.—Failure of adapted styles.—Not all structure beautiful, nor all beauty structural.—Structures designed for display.—Appeal made by decoration.—Its natural rights.—Its alliance with structure in Greek architecture.—Relations of the two in Gothic art.—The result here romantic.—The mediæval artist.—Representation introduced.—Transition to illustration.

Pages 116-143

CHAPTER VIII

PLASTIC REPRESENTATION

Psychology of imitation.—Sustained sensation involves reproduction.—Imitative art repeats with intent to repeat, and in a new material.—Imitation leads to adaptation and to knowledge.—How the artist is inspired and irresponsible.—Need of knowing and loving the subject rendered.—Public interests determine the subject of art, and the subject the medium.—Reproduction by acting ephemeral.—High demands of sculpture.—It is essentially obsolete.—

When men see groups and backgrounds they are natural painters.—Evolution of painting.—Sensuous and dramatic adequacy approached.—Essence of landscape-painting.—Its threatened dissolution.—Reversion to pure decorative design.—Sensuous values are primordial and so indispensable.....Pages 144-165

CHAPTER IX

JUSTIFICATION OF ART

Art is subject to moral censorship.—Its initial or specific excellence is not enough.—All satisfactions, however hurtful, have an initial worth.—But, on the whole, artistic activity is innocent.—It is liberal, and typical of perfect activity.—The ideal, when incarnate, becomes subject to civil society.—Plato's strictures; he exaggerates the effect of myths.—His deeper moral objections.—Their rightness.—Importance of æsthetic alternatives.—The importance of æsthetic goods varies with temperaments.—The æsthetic temperament requires tutelage.—Æsthetic values everywhere interfused.—They are primordial.—To superpose them adventitiously is to destroy them.—They flow naturally from perfect function.—Even inhibited functions, when they fall into a new rhythm, yield new beauties.—He who loves beauty must chasten it.....Pages 166-190

CHAPTER X

THE CRITERION OF TASTE

Dogmatism is inevitable but may be enlightened.—Taste gains in authority as it is more and more widely based.—Different æsthetic endowments may be compared in quantity or force.—Authority of vital over verbal judgments.—Tastes differ also in purity or consistency.—They differ, finally, in pertinence, and in width of appeal.—Art may grow classic by idealising the familiar, or by reporting the ultimate.—Good taste demands that art should be rational, *i.e.*, harmonious with all other interests.—A mere "work of art" a baseless artifice.—Human uses give to works of art their highest expression and charm.—The sad values of appearance.—They need to be made prophetic of practical goods, which in turn would be suffused with beauty.....Pages 191-215
