PREFACE TO THE NINTH EDITION.

THE short space of time which has elapsed between the issue of the eighth and the present edition has not permitted me to gather many new experiences. All I can offer my readers are some new special Indications.

DR. SCHÜSSLER.

OLDENBURG, *July* 1882.

PREFACE TO THE THIRD EDITION.

I PRESENT my little work in the Third Edition to the public, after having added several Indications, and having completely re-written it.

The First and the Second Editions were so quickly out of print that I may hope the present one will meet the kindly reception of its predecessors.

As every innovation gains by opposition, it is a source of satisfaction to me that some opponents have appeared against my Therapeutics. The views of these critics the reader will find in the part entitled "Refutation of some Objections."

OLDENBURG, *May* 1876.

TRANSLATOR'S PREFACE.

WITH Dr. Schüssler's permission I have undertaken the translation of this method of treating disease by means of triturated Tissue Salts,—Constitutional Tonics, which tend to restore the lost or disturbed proper balance of Cell Salts. Its publication in English will, I hope, make it known to many to whom otherwise it might be unavailable.

Biology, Cellular Pathology, Spectrum Analysis, Minute Anatomy, Analytical Chemistry, and such kindred Sciences, have furnished a field of research to this German physician. Professional skill and science combined, have thus led to the elucidation of this new system of Therapeutics.

A General and Therapeutical Index and a Reference Table have been arranged and added by me to the original; the former to give a resumé of diseases which are histo-pathologically alike, and require such remedy as is mentioned at the head of each group.

M. D. W.

DUNDEE, 1880.

INTRODUCTION.

MOLESCHOTT, Professor of Physiology at the University of Rome, says in his work on "*Vital Circulation*": (Kreislauf des Lebens).

"The structure and vitality of the organs depend upon the presence of the necessary quantities of the inorganic constituents.

"On this fact is based the great estimation in which of late years the subject of the relative proportions of the inorganic substances to the individual parts of the body has been held.

"This estimation neither proudly despises any fact, nor fosters, on the other hand, futile hopes; but promises both to Agriculture and Medicine a brilliant future.

"In the face of such positive facts, it can no longer be denied that the substances which remain after incineration or combustion of the tissues—the ashes—are as important and essential to the inner composition, and conse-
