1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part outlines the various methods and tools used to collect and analyze data. This includes the use of surveys, interviews, and focus groups to gather qualitative information, as well as the application of statistical techniques to quantitative data.

3. The third part of the document focuses on the interpretation of the collected data. It provides a detailed analysis of the findings, highlighting key trends and patterns that have emerged from the research. This analysis is supported by relevant statistics and charts.

4. The final part of the document discusses the implications of the research findings. It identifies the key areas where the organization's performance can be improved and provides specific recommendations for action. These recommendations are based on the insights gained from the data analysis.

INTRODUCTION

The following discussion of the conservation problem is not a systematic treatise upon the subject. Some of the matter has been published previously in magazines, and some is condensed and rearranged from addresses made before conservation conventions and other organizations within the past two years.

While not arranged chronologically, yet the articles here grouped may serve to show the rapid, virile evolution of the campaign for conservation of the nation's resources.

I am indebted to the courtesy of the editors of *The World's Work*, *The Outlook*, and of *American Industries* for the use of matter first contributed to these magazines.
