(HUMAN ENTOZOA)

THEIR SOURCES, NATURE, AND TREATMENT

BY

T. SPENCER COBBOLD, M.D. F.R.S.

LECTURER AT THE MIDDLESEX HOSPITAL

LONDON

LONGMANS, GREEN, AND CO.

1866

157. o. 74.

PREFATORY NOTE.

ESSENTIALLY PRACTICAL in its character, this little work is not intended to supersede my larger treatise on 'Entozoa.'

The favourable reception of that work by the profession and by the scientific public leads me to believe that a less expensive volume, free from unnecessary technicalities, may not prove unacceptable.

I have purposely limited my remarks to one great group of the numerous parasites which invade the human body; but to render the work generally useful, I have added a complete list of the human entozoa in the introduction.

The Appendix is based upon observations which I publicly communicated at the last meeting of the British Association held at Birmingham.

The experience I have acquired in practice has led me to insist strongly on the employment of pure and freshly prepared drugs. In old standing cases of tapeworm and threadworm (*Ascarides*) attention to this point will often command success, even where the same drug had been previously used.
