| CHAPTER XIII. | |
| DISEASES OF THE EYEBALL..... | 240 |
| CHAPTER XIV. | |
| DISEASES OF THE ORBIT..... | 249 |

PREFACE.

The object of the writer, in the following pages, has been to state briefly the generally accepted principles of ophthalmology, and to describe those methods of treatment upon which he has become accustomed to rely, from personal experience of their value. The small size of the book has restricted allusions to authorities, to the history of the science, or to any other subject than those mentioned above. Such of the illustrations as are not original have been reproduced from Landolt on the Examination of the Eyes; from Gray's Anatomy, and from the treatises of Wells and Stellwag. Colored lithographs of the fundus oculi, or of the external appearances in disease, are of little or no value unless done in the best manner, and the cost of such work has prevented its introduction. A sheet of test types, after those of Snellen, is appended. It should be removed and pasted on a card, for use in the consulting room.
