## P R E F A C E.

---

THE acknowledged want of a text-book on the subject of Trilinear Co-ordinates, adapted to the use of students for honours in the Mathematical Schools, has led to the publication of the present volume.

It has been found necessary, with a view to rendering the elementary portion of the work as complete as possible, to exclude the consideration of equations of an order higher than the second. For the same reason, problems relating to the focal properties of conic sections have not been discussed; but the Author does not regret that the limits of the work have compelled him to pass over investigations of a class in which little or nothing is gained by the employment of the trilinear method.

The introduction of matter belonging more properly to the department of Pure Geometry, as also any reference to other systems of co-ordinates, has been as far as possible avoided; except, perhaps, in the fifth Chapter, where the importance of the subjects treated and the want of a succinct yet tolerably complete account of them seemed to warrant the digression.

Besides an acquaintance with the principles of the Differential Calculus, such as a student who is about to enter upon this branch of Modern Geometry is sure to possess, the reader is supposed to have some knowledge of the Theory of Determinants.

The Author feels it right to state that the papers on

Trilinear Co-ordinates communicated by Mr. Allen Whitworth, of St. John's College, Cambridge, in the first numbers of the "Messenger of Mathematics" did not come under his notice until the earlier portion of this treatise was written. The results now published were arrived at independently, the perusal of the papers referred to having led only to the insertion of Art. 152.

In writing Chap. V. the Author has derived much assistance from Mr. Townsend's "Modern Geometry" and from a work by M. Housel entitled *Introduction à la Géométrie Supérieure*. To books which are so well known as Dr. Salmon's "Conic Sections" and Mr. Ferrers' "Trilinear Co-ordinates" it is difficult to say to what extent he is indebted.

In conclusion, the Author would take the present opportunity of expressing his sincere thanks to Mr. J. D. Davenport, Fellow of Brasenose College, for his kindness in revising a great portion of the manuscript for the press, as well as for many valuable suggestions, and to other friends for any assistance they may have rendered.

EXETER COLLEGE, OXFORD,  
December 4, 1865.

# CONTENTS.

## CHAPTER I.

### EXPLANATION OF THE METHOD. THE STRAIGHT LINE.

ARTS.	PAGE
1. TRILINEAR co-ordinates of a point . . . . .	1
2. Convention with regard to sign . . . . .	ib.
3—5. Identical relation between the co-ordinates of a point . . . . .	2
6. Interpretation of a few simple Trilinear Equations . . . . .	3
7, 8. THE GENERAL EQUATION OF THE STRAIGHT LINE, in terms of the co-ordinates of a fixed point on it and the sines of the angles which it makes with the sides of the triangle of reference . . . . .	4
9, 10. The equation of a straight line in terms of the co-ordinates of a fixed point on it and the <i>direction-cosines</i> of the line . . . . .	6
11. To shew that the equation of a right line may be written in the form $lx + my + nz = 0$ . . . . .	7
12. To shew, conversely, that <i>every</i> equation of this form represents a straight line . . . . .	8
13. Polar form of the equation of the second degree . . . . .	ib.
14. Abbreviations explained . . . . .	9
15. To construct geometrically the straight line whose equation is given in the homogeneous form . . . . .	ib.
16. Equation of a straight line which passes through the intersection of two given lines . . . . .	10
17. Condition that three straight lines should meet in a point . . . . .	ib.
18 <i>et seq.</i> EXAMPLES . . . . .	11
19. To find the equations of the bisectors of the angles of a triangle $ABC$ , and to shew that they meet in a point . . . . .	ib.
20. Co-ordinates of this point . . . . .	ib.
21. Equation of a straight line through one of the vertices . . . . .	ib.
22. To find the equations of the bisectors of sides of the triangle $ABC$ , and to shew that they meet in a point . . . . .	12
23. Co-ordinates of this point . . . . .	13
24. To find the equations of the perpendiculars let fall from the vertices of the triangle $ABC$ upon the opposite sides, and to shew that they meet in a point . . . . .	ib.

ARTS.	PAGE
25. Co-ordinates of this point . . . . .	14
26. The proportional values of the co-ordinates of a point used instead of their actual values . . . . .	15.
27. Other methods of obtaining the results of Arts. 23, 24 . . . . .	15

## CHAPTER II.

## THE STRAIGHT LINE CONTINUED. RELATIONS BETWEEN THE CONSTANTS.

28—31. Fundamental relations between the constants in the two forms of equation of the straight line investigated in Arts. 7—10 . . . . .	16
32. <i>Symmetrical</i> equations of the straight line which passes through a given point and makes a given angle with a given straight line . . . . .	17
33. <i>Symmetrical</i> equations of a straight line perpendicular to a given straight line . . . . .	18
34—38. Relations between the direction-cosines of a given straight line . . . . .	19
35. <i>Symmetrical</i> expressions for the area of the triangle of reference in terms of the direction-cosines of any line . . . . .	20
39. To write down the <i>homogeneous</i> equation of a straight line whose <i>symmetrical</i> equations are given . . . . .	22
40, 41. To express the direction-cosines of a straight line in terms of the coefficients of its <i>homogeneous</i> equation . . . . .	23
42. To express the sines of the direction-angles in terms of the coefficients of its <i>homogeneous</i> equation . . . . .	24
43, 44. Formulae relating to straight lines . . . . .	25.

## CHAPTER III.

## THE STRAIGHT LINE CONTINUED. LINE AT INFINITY.

45, 46. Expression for the distance between two given points . . . . .	26
47. Length of the perpendicular from a given point upon a given straight line . . . . .	27
48, 49. Length of the line drawn from a given point to a given straight line so as to make with it a given angle . . . . .	28
50, 51. Expressions for the <i>sine</i> , <i>cosine</i> , and <i>tangent</i> of the angle between two given straight lines . . . . .	29.
52, 53. Equation of the straight line at infinity . . . . .	30

## CHAPTER IV.

## PROBLEMS ON THE STRAIGHT LINE.

54. To find the co-ordinates of the point of intersection of the straight lines $(l_1, m_1, n_1)$ , $(l_2, m_2, n_2)$ . . . . .	31
---	----

CONTENTS.

vii

ARTS.	PAGE
55. Condition that the three straight lines $(l_1, m_1, n_1)$ , $(l_2, m_2, n_2)$ , $(l_3, m_3, n_3)$ may meet in a point . . . . .	31
56. Condition that three given points may lie in the same right line . . . . .	32
57. <i>Symmetrical</i> equations of the straight line which joins two given points . . . . .	<i>ib.</i>
58. <i>Homogeneous</i> equation of the straight line which joins two given points . . . . .	33
59, 60. <i>Homogeneous</i> equation of a right line passing through a given point, and whose direction-cosines are given . . . . .	<i>ib.</i>
61. Equation of the straight line which joins a given point to the intersection of two given straight lines . . . . .	34
62, 63. Equation of the straight line which bisects the angle between two given straight lines . . . . .	<i>ib.</i>
64. Condition that two straight lines whose <i>homogeneous</i> equations are given should be parallel to each other . . . . .	36
65, 66. Equation of the straight line which passes through a given point, and is parallel to a given straight line . . . . .	<i>ib.</i>
67. Two straight lines are parallel when their equations differ only by a constant term . . . . .	37
68. Condition of parallelism of two straight lines whose equations are given in the <i>homogeneous</i> form . . . . .	<i>ib.</i>
69—74. Condition of perpendicularity of two straight lines . . . . .	38
75. <i>Symmetrical</i> equations of the perpendicular to a given straight line through a given point . . . . .	40
76. <i>Homogeneous</i> equation of the same . . . . .	<i>ib.</i>
77. <i>Homogeneous</i> equation of the straight line which passes through a given point and makes an angle $\alpha$ with a given straight line . . . . .	41

CHAPTER V.

ANHARMONIC RATIOS. HARMONIC POINTS AND PENNCILS. HOMOGRAPHIC SYSTEMS. INVOLUTION.

78, 79. DEFINITIONS.— <i>Pencil of rays, centre of pencil, transversal, range, axis</i> . . . . .	43
80. <i>Anharmonic ratio</i> defined . . . . .	44
81. A system of four points or rays gives six different anharmonic ratios, whereof three are the reciprocals of the other three . . . . .	<i>ib.</i>
82. Relations subsisting between these ratios . . . . .	45
83. To shew that the anharmonic ratio of the four points in which a transversal meets a pencil is constant for any position of the transversal . . . . .	<i>ib.</i>
