TO THE READER.

IN the following treatise I have endeavoured to unite conciseness and scientific accuracy, while adhering, as far as possible, to the traditional lines of the Aristotelian Logic. Critical discussions have been avoided, as out of place in a purely Elementary Treatise, but the student who desires to pursue the subject further will have nothing to unlearn. A few things have been included which could not with propriety have been omitted, even in an Elementary Treatise, but which may be passed over by the student who only seeks a minimum of knowledge of Logic. The paragraphs containing these are printed with close lines, and are (with insignificant exceptions) further distinguished in the Table of Contents by a prefixed [+].
