### PREFACE

TO

#### THE SECOND EDITION

THE ALTERATIONS in the present edition are not extensive. They are only those which experience in teaching has shown to be advisable, or which the advance in knowledge has rendered necessary.

Two new figures have been introduced—namely fig. 88, from Professor Gamgee's 'Physiological Chemistry,' and fig. 70, from Sir George Johnson's 'Medical Lectures and Essays.' For leave to use these I beg to thank the respective authors and publishers.

I am also indebted for valuable suggestions to Professor Schäfer, Dr. C. J. Martin, and Dr. T. Gregor Brodie, who has again given me great assistance in the reading of proof-sheets.

W. D. HALLIBURTON.

KINO'S COLLEGE: January 1896.

#### PREFACE

TO

#### THE FIRST EDITION

This book is written with the object of supplying the student with directions for examining practically the most important of the subjects included under the heading Chemical Physiology, or Physiological Chemistry. At the same time it is intended to serve as an elementary text-book of the subject.

The plan of the work is the same as that adopted by Professor Schäfer, in his 'Essentials of Histology.' The practical lessons are followed by a brief description of the matter of which they treat. Each of the elementary lessons may be supposed to occupy a class for one hour. The advanced lessons will take more time—usually two hours.

The practical lessons are those which I have been using for many years past in my own classes. Their original source is the 'Syllabus of Lectures' published by Professor J. Burdon Sanderson in 1879, and although some few of the lessons are but little altered, the greater number have been very considerably modified to include the results of recent researches.

The illustrations have for the most part been transferred from my text-book of 'Chemical Physiology and Pathology.' A few additional figures have been expressly drawn for this work. Figs. 4, 10, and 15 have been taken from Yeo's 'Physiology'; figs. 16 and 17 from McKendrick's 'Physiology'; figs. 51 and 52 from Bryant's 'Surgery'; and figs. 72 and 78 from Waller's 'Physiology.' For leave to use these I beg to tender my thanks to the respective authors and publishers.

The duty of reading the proof-sheets has been greatly lightened for me by my friend Dr. T. G. BRODIE, and I have to thank him for many valuable suggestions and alterations.

W. D. HALLIBURTON.

KING'S COLLEGE: July 1893.
