## PREFACE

The papers gathered in this volume have been published at intervals over a considerable period, and have been addressed to different audiences. Nevertheless they have a unity of purpose and plan which will serve, I trust, to justify their appearance in the present form. They cover the arguments commonly heard in the tariff controversy and more especially those urged in the course of recent debates in the United States. Most of them are addressed to the general public, and assume on the reader's part no special training in economics. All have now been revised with a view to connected and consistent presentation.

One topic of importance and of general interest is touched but briefly—the doctrine of protection to young industries. I have considered this topic in another book, "Some Aspects of the Tariff Question," with so much detail that it could here not be taken up otherwise than summarily without repeating in so many words what had already been said. The reader who may be interested is referred to the earlier book, in which are given the results of detailed investigations bearing on several questions of principle, among them the validity of the argument for protection to young industries. With this exception the present volume may be fairly said to cover, if not the whole of the tariff controversy, those phases of it which now are chiefly under discussion in the United States.

## CONTENTS

	PAGE
I THE PRESENT POSITION OF THE DOCTRINE OF FREE TRADE . . . . .	1
The doctrine of free trade apparently triumphant in 1870.— Subsequent reaction.— Tenacious hold of ancient fallacies.— Protection and wages.— Dumping.— Agricultural competition and political problems.— Protection to young industries.— The causes of economic progress.— England, Germany, the United States.— Intensification of national feeling.— Attitude of economists.— Conclusion.	
II ABRAHAM LINCOLN ON THE TARIFF: A MYTH . . . . .	34
"Keeping the goods and the money": a myth.— A sequel.— Epilog.	
III HOW THE TARIFF AFFECTS WAGES . . . . .	48
Widespread belief in the United States that the tariff raises wages.— Familiar facts inconsistent with the belief.— The volume and variety of our exports.— Great Britain not undersold by British India.— Trade relations between Great Britain and Germany.— Does the Tariff, though not the cause of high wages, serve to keep them up?— It does in those competitive industries in which effectiveness is not high.— Results to be expected from abolition of duties.— Improbability of any abrupt change.— Cases of labor monopoly.— Causes of the general and dominant productiveness of American industry.— "Efficiency" and "effectiveness" in manufacturing industries.— Significance of low wages in certain manufacturing industries.— Conclusion.	
IV WAGES AND PRICES IN RELATION TO INTERNATIONAL TRADE . . . . .	70
Wages and other money incomes, not prices, the important thing.— High wages consistent with low prices where there is effectiveness of labor.— "Domestic commodities" not necessarily high in price in countries where money wages are high.	

	PAGE
— Illustrations from the United States.— High money wages the result of effectiveness of labor in exporting industries.— In what sense high prices are advantageous to a country.— Low wages in a non-competing group have the same effect as would high effectiveness of labor in that group.— Conclusion.	
<b>V HOW TO PROMOTE FOREIGN TRADE . . . . .</b>	<b>95</b>
Bitterness of trade rivalry.— Foreign trade enriches a country not by bringing in money, but through the exchange of exports for imports.— The mechanism of international trade and the effects on it of the war.— The fundamental factor for promoting exports is the effectiveness of labor and capital.— Four devices for promoting export trade, (1) export bounties, (2) special transportation rates for export business, (3) special prices by producers on export sales, (4) concessions in rates of duty secured from foreign countries.— Attitude of the United States in international trade and international politics.— The open door.	
<b>VI RECIPROCIITY . . . . .</b>	<b>120</b>
Effects of different forms of reciprocity.— Limited remissions or reductions of duty.— Hawaiian sugar.— European reciprocity arrangements after 1860.— Another method, as in the McKinley tariff act of 1890: imposition of special duties.— Effects in the United States and in foreign countries.— Conclusion.	
<b>VII COST OF PRODUCTION AND THE TARIFF . . . . .</b>	<b>134</b>
The plan of basing tariff rates on differences in cost of production.— Worthless as a solution of the tariff question.— Consistently applied, it means not moderate duties, but universal and unlimited protection.— Difference between the free-trader's point of view and the protectionist's.— Effectiveness of labor in relation to proposed equalization of cost.— Cost inquiries nevertheless desirable.— Dependency of manufacturing industries on protection exaggerated.— Dependence of universal prosperity on the tariff even more exaggerated.	
<b>VIII AN INQUIRY ON THE COSTS OF WOOL AND WOOLENS</b>	<b>149</b>
Report of the Tariff Board of 1910 on wool and woollens.— How costs of wool were calculated.— Conclusions on the expediency of a duty on raw wool.— Costs of woollen goods.— Light on the compensating system.— The question of principle.
