**FIRST BOOK OF LESSONS IN
CHEMISTRY IN ITS APPLICATION
TO AGRICULTURE. FOR THE USE
OF FARMERS AND TEACHERS**

THE
FIRST BOOK
OF
LESSONS IN CHEMISTRY,
IN ITS
APPLICATION TO AGRICULTURE.

FOR THE USE OF
FARMERS AND TEACHERS.

BY
JOHN F. HODGES, M.D.

HONORARY MEMBER OF THE PHARMACEUTIC INSTITUTE OF NORTH GERMANY
FELLOW OF THE CHEMICAL SOCIETY OF LONDON, PROFESSOR OF
CHEMISTRY TO THE ROYAL BELFAST INSTITUTION,
AND TO THE CHEMICO-AGRICULTURAL
SOCIETY OF ULSTER.

LONDON:
SIMMS AND M'INTYRE,
13, PATERNOSTER ROW, AND 26, DONEGALL STREET,
BELFAST.

1848.

CC-0
H6

TO THE MEMBERS OF THE CHEMICO-AGRICULTURAL
SOCIETY OF ULSTER.

My Lords and Gentlemen,—

As you have afforded abundant proofs of zeal for the diffusion of agricultural knowledge, and as it is your efforts that have mainly contributed to promote that desire for more extended information in the scientific principles of their profession, which at present prevails among the farmers in the North of Ireland, I take the liberty of dedicating to you this little Work, which I trust may, in some degree, prove instrumental in rendering this knowledge more accessible to all classes of our countrymen.

I have the honour to be,

My Lords and Gentlemen,

Your most obedient servant,

JOHN F. HODGES.

Belfast, November 1, 1848.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in the context of public administration and financial management.

2. The second part of the document outlines the various methods and tools used to collect, analyze, and report data. It highlights the need for standardized procedures and the use of modern technology to ensure the reliability and accuracy of the information gathered.

3. The third part of the document focuses on the role of the audit committee and the internal control system. It discusses how these mechanisms are designed to identify and mitigate risks, prevent fraud, and ensure that the organization's resources are used efficiently and effectively.

4. The fourth part of the document addresses the challenges and opportunities associated with digital transformation. It explores how the integration of digital technologies can streamline processes, improve communication, and enhance the overall performance of the organization.

5. The fifth part of the document provides a summary of the key findings and recommendations. It stresses the importance of continuous improvement and the need for regular reviews and updates to the internal control system to adapt to changing circumstances and emerging risks.

CONTENTS.

	PAGE
INTRODUCTORY REMARKS on the progress of scientific knowledge.....	1

Influence exerted by chemical discoveries on the commerce and prosperity of nations—Repugnance of farmers to "book farming"—Changes which have taken place in the opinions which were formerly entertained respecting the application of science to agriculture—Recent progress of practical agriculture—Introduction of guano and bones—Services which chemistry is capable of rendering to the farmer—Ancient state of agriculture in Ireland—Remarkable productive powers of the soils of this country—Knowledge and energy required for their proper cultivation—Defects of the education at present acquired by farmers—Objects of the lessons—Obstacles to the progress of agricultural knowledge—Professional education necessary to the farmer—Methods which he should pursue in studying the scientific principles of his art—Sources from which his crops obtain their food—Distinction between simple and compound bodies—elements which contribute to the growth of plants and minerals—List of simple apparatus and specimens to be procured by agricultural teachers and pupils.

CHAPTER I.

Account of the materials from which plants are formed	19
---	----

Essential conditions for the growth of plants—Properties of the atmosphere—Meaning of the term mixture as distinguished from chemical combination—Illustrative experiments—Decomposition—Nature of the substances of which the atmosphere is composed—Properties of oxygen gas, and its influence on animal and vegetable life—Instructions for the preparation of gases—Experiments for illustrating the properties of oxygen, nitrogen—Ammonia, carbonic acid—Definition of terms used in agricultural works—Experiments by which the existence of ammonia in the atmosphere was determined—Proportion in which carbonic acid exists in plants—Its existence in water—Its action on the materials of the soil.

CHAPTER II.		PAGE
Materials which water is capable of supplying to plants		34
Its composition—Steam—Properties and preparation of hydrogen gas—Distillation—Solid matters discovered in the water of springs and rivers—Importance of water to the growth of plants—Climate of Ireland—its influence on farm work—Evaporation—Advantages of thorough draining.		
CHAPTER III.		
Materials existing in the soil which contribute to the growth of plants		42
Potash—Potassium—Carbonate of Potash—Compounds of Soda—Lime—forms in which it exists in Ireland—Gypsum—Magnesia—Magnesian limestone—Oxides of iron and manganese—Properties of Silica—Mode in which it is rendered soluble in water—Chlorine—Properties of sulphuric acid—Phosphoric acid—Phosphate of lime—Importance of the inorganic matters discovered in the ashes of plants—Amount of inorganic and organic matters which cultivated plants contain.		
CHAPTER IV.		
Substances into which plants convert the simple elements on which they live		51
Nature of the compounds produced by plants—method of obtaining these compounds for examination—Woody fibre—Cellular tissues—Manufacture of starch—Composition of starch—its transformation into sugar—production of British gum and starch sugar—Varieties of gum—Mucilage—Albumen of the potato—Gluten, method of preparing it from wheat-flour—its composition—Casein—Diastase—Fatty matters, oils, and acids, which are found in plants—Composition of linseed-cake—Quantity of oil and fatty matter in wheat-flour—Purposes which these compounds are designed to serve—Changes by which plants convert the materials of the soil and air into food for man.		
CHAPTER V.		
Structure of plants, and changes which accompany their growth		63
The seed—Changes which take place when barley is converted into malt—Parts of which plants consist—Conditions necessary for the development of the seed—Growth of the plant—Course of the sap—Effects produced by plants on the atmosphere—Arrangements by which the uniformity of its composition is maintained—Experiments of various chemists—Influence of light on plants.		

CHAPTER VI.

The soil, its formation and composition 77

Varieties in the appearance and depth of soils in various parts of Ireland—The subsoil—Agencies by which the hard rock is converted into the arable soil—Vegetation of coral islands—Origin of the organic matters contained in soils—Properties of alumina—Composition of clay—Its influence on the fertility of the soil—Importance to the farmer of the knowledge of the composition of the rocks from which soils are derived—Granite—its distribution in Ireland—composition of the minerals which compose it—Deficient ingredients in granite soils and influence of elevation on their fertility—Mica slate—character of the soils derived from it—Clay slate—Variety of agricultural character presented by the soils of this formation—Sandstone and Greywacke soils—Limestone—Magnesian limestone—Qualities of the soils in the centre of Ireland—Trap rocks—White limestone of Antrim—Organic matter of the soil—Nature of peat—Erroneous opinions respecting the influence of humus on vegetation—Physical qualities of soil.

CHAPTER VII.

Effects produced on soils by the growth of plants, and plans adopted for maintaining their fertility 95

Origin of agriculture—effects of cultivation upon wild plants—knowledge necessary to enable the farmer to improve the quality of the soil—Nature of exhaustion—Kind and quantity of inorganic matters contained in the crops cultivated in this country—means adopted for maintaining the productiveness of soils—Green crops—Circumstances which influence the exhausting effects of plants—Rotation of crops—Practical rules for the farmer—Influence of the soil upon the quality of the crop.

CHAPTER VIII.

Means adopted for improving the soil, and maintaining its fertility by the application of manures..... 105

ANIMAL MANURES—Principles of manuring—Composition of the liquid and solid excrements of man—their importance as applications to the soil—Effects of diet upon their fertilizing qualities—Methods of applying them adopted in various countries—Poudrette—Urates—Plans proposed for the application of sewage to agricultural purposes—Means by which night soil and urine may be rendered inodorous—Composition and agricultural value of the urine of the horse, cow, and pig—Calculation of the loss experienced by the farmer who neglects their preservation—Chemical composition and fertilizing qualities of the solid excrements of the domestic animals—Difference in the value of the dung of
