## PREFACE

### TO THE FOURTH REVISION.

As "The Chemistry of the Farm" is now pretty widely known, and has been translated into several languages, a few words as to its origin will perhaps be of interest.

It is probably not generally known that the present work was originally undertaken by Sir J. B. LAWES. It was in the summer of 1878 that the late Mr. J. CHALMERS MORTON began to make arrangements for the preparation of a little Handbook of Agriculture for the use of Schools. The book he desired was to be similar to the "notes which a sharp lad would take home from a course of lectures." It was intended to be the work of several writers, and Sir J. B. LAWES was asked, and undertook, to contribute the part relating to the scientific application of manures. In November, 1878, Sir J. B. LAWES asked me to take his place in writing the chemical part of the proposed book; and he, at the same time, handed me the notes which he had already prepared. My contributions were first printed in "The Agricultural Gazette," and appeared at intervals during 1879-80. The work had then grown far beyond the limits originally assigned, and was finally published in 1881 as a separate volume.

"The Chemistry of the Farm" has doubled in size during the twenty-one years that have elapsed since its original publication. The alterations that have

iv. *Preface to the Fourth Revision.*

been made for the present revision are very considerable, the largest changes being made in the sections relating to the nutrition of animals. These alterations have been rendered necessary by the publication of the epoch-making investigations of ZUNTZ and HAGEMANN on the nutrition of the horse,<sup>1</sup> and of the equally important researches of KELLNER, KÖHLER, and their associates, on the nutrition of the ox.<sup>2</sup> By these laborious researches many important problems have been solved, and a foundation laid on which a really accurate science of feeding may be constructed.

In the new work of these German investigators, both the value of the food, and of the work which it undergoes, or accomplishes, is reckoned in units of heat. The fundamental facts established by their investigations have been brought together in a separate chapter (VII.). The discussions in this chapter, while introductory to much that follows, unavoidably assume a knowledge of some facts afterwards mentioned; students using the book will therefore do well to refer to this chapter several times in the course of their subsequent reading.

The chapter on Dairy Chemistry has been considerably enlarged; and here the writer has been indebted to the work of Mr. H. DROOP, RICHMOND, for much of the new matter which has been introduced.

As this book is intended for the use of students,

---

<sup>1</sup> Untersuchungen über den Stoffwechsel des Pferdes bei Ruhe und Arbeit, von N. Zuntz und O. Hagemann, Berlin, 1898.

<sup>2</sup> Untersuchungen über den Stoff- und Energie-Umsatz, des erwachsenen Rindes bei Erhaltungs- und Produktions-futter, von O. Kellner, Berlin, 1900.

no apology seems needed for the cross references which frequently appear; their object is to enable the student to bring at once together all the scattered facts and statements bearing upon the subject under discussion.

The metric system has been employed to some extent, as well as the ordinary English weights and measures. The former has been used chiefly for the expression of scientific ideas, the latter for practical purposes.

It is undoubtedly true that as science advances it becomes more complicated, and less capable of appreciation by the general reader. The modern student needs a more thorough training than one of bygone years, if he is to be able to grasp and put to practical use the new facts and ideas which scientific investigations are continually bringing forward. Agricultural education must proceed side by side with scientific research, if the latter is to be turned to any practical use by the farmer.

R. WARINGTON.

HARPENDEN,  
*September, 1902.*

## CONTENTS

---

CHAPTER	PAGE
I.—PLANT GROWTH . . . . .	1
II.—THE ATMOSPHERE AND SOIL . . . . .	19
III.—MANURES . . . . .	49
IV.—CROPS . . . . .	71
V.—ROTATION OF CROPS . . . . .	89
VI.—ANIMAL NUTRITION . . . . .	104
VII.—NUTRITION IN TERMS OF ENERGY . . . . .	118
VIII.—FOODS . . . . .	129
IX.—RELATION OF FOOD TO ANIMAL REQUIREMENTS . . . . .	169
X.—RELATION O. FOOD TO MANURE . . . . .	210
XI.—THE DAIRY . . . . .	225
