PREFACE

It was the good fortune of the author to attend the University of Paris during the spring semester of 1919. One of the special courses which the French authorities, with their characteristic hospitality, arranged for the large number of students from the American army, was a course in aërodynamics, given by Professor Marchis. The comprehensive knowledge that Professor Marchis possessed of all branches of the new science of aëronautics, the inestimable value of his advice to the French Republic during the war, the interest he took in his rather unusual class, could not fail to be an inspiration.

This book is an outgrowth of those parts of Professor Marchis' lectures that were of particular interest to the author. It is in no sense a complete treatise on aviation. Questions of design and construction are passed over with bare mention. The book is intended for students of mathematics and physics who are attracted by the dynamical aspect of aviation. The problems presented by the motion of an airplane are novel and fascinating. They vary from the most pleasing simplicity to the most stimulating difficulty. The question of stability, particularly, exhibits at the same time the elegance and the power of analysis, and shows the adaptability of some of the general developments in dynamics. The field is assuredly a fruitful one of study, and increasing demands will be put upon the mathematician as the science of aviation continues its rapid development. The mathematician can well own a sense of pride that he had already at hand, in the developments inaugurated by Euler and Routh, a means of dealing accurately with the question of stability, that plays so fundamental a rôle in the science of flying.

The treatment in the text is for the most part elementary. The last chapter alone demands of the student familiarity with more advanced dynamical methods. In the treatment of descent a slight digression is made to consider in part the nature of the solution of a system of two differential equations. This was done in order not to completely evade what seems a problem of considerable difficulty. It might seem that a treatment of the propeller should not find a place in a book with the purpose of this one. No student of mathematics, however, could fail to own a curiosity as to a propeller's action, and it is hoped the discussion, while not complete, will at least serve as a sufficient introduction.

The various curves in the text were plotted by Mr. R. W. Smith, a former student in this university. The author is further indebted to the Smithsonian Institution for permission to use Figs. 12 and 49.

In addition to the various books that are referred to in the text the author has made use of his notes of the lectures of Professor Marchis, translated into English by Madame Ciolkowska, who rendered most valuable aid as an interpreter for those who understood and spoke the language of Professor Marchis only with difficulty.

K. P. WILLIAMS.

Indiana University,
July, 1920.

CONTENTS

CHAPTER I. THE PLANE AND CAMBERED SURFACE

ARTICLE	PAGE
1, 2. PRELIMINARY CONSIDERATIONS.....	1-3
3. PRESSURE ON A PLANE.....	4
4. THE INCLINED PLANE.....	5
5. THE CENTER OF PRESSURE.....	6
6. ASPECT RATIO.....	6
7. THE CAMBERED WING.....	7
8. CHARACTERISTIC CURVES FOR A GIVEN WING.....	8, 9
9. POLAR DIAGRAM.....	10
10. EFFECT OF VARIATION OF WING ELEMENTS.....	11
11. PRESSURE OVER THE WING.....	11
12. CENTER OF PRESSURE.....	12
13. RELATION BETWEEN K_y AND K_x	13
14. THE BIPLANE.....	14
15. BODY RESISTANCE.....	15
16. EXPERIMENTS ON COMPLETE MODEL.....	15

CHAPTER II. STRAIGHT HORIZONTAL FLIGHT

17. PRELIMINARY CONSIDERATIONS.....	18
18. HORIZONTAL FLIGHT.....	19
19. THE VELOCITY.....	20
20. LANDING SPEED.....	20
21. EFFECT OF ALTITUDE.....	21
22. THE EFFORT OF TRACTION.....	22
23. OPTIMUM ANGLE.....	22
24. FINENESS.....	23
25. OPTIMUM ANGLE, CONTINUED.....	24
26, 27. USEFUL POWER.....	25
28, 29. ECONOMICAL ANGLE.....	26-28
30. GENERAL CONSIDERATIONS.....	29

CHAPTER III. DESCENT AND ASCENT

I. DESCENT

31. PRELIMINARY CONSIDERATIONS CONCERNING DESCENT.....	31
32. EQUATIONS OF MOTION.....	31

ARTICLE	PAGE
33, 34. RECTILINEAR DESCENT.....	33-35
35. GENERAL RESULTS CONCERNING DESCENT.....	36
36-38. DESCENT CONSIDERING AIR DENSITY CONSTANT.....	38-42

2. ASCENT

39. PRELIMINARY CONSIDERATIONS CONCERNING ASCENT.....	43
40. EQUATIONS OF MOTION FOR ASCENT.....	43
41. VELOCITY ALONG PATH.....	44
42. THE FORCE OF TRACTION.....	44
43. THE POWER NECESSARY.....	46
44. THE VERTICAL VELOCITY.....	47
45. GENERAL CONSIDERATIONS.....	48
46. EXPERIMENTAL LAW OF VERTICAL VELOCITY.....	49
47. TIME OF ASCENT.....	50
48. DETERMINATION OF THE CEILING.....	50

CHAPTER IV. CIRCULAR FLIGHT

1. HORIZONTAL TURNS

49. GENERAL CONSIDERATIONS.....	52
50. EQUATIONS OF MOTION.....	53
51. VELOCITY AND INCLINATION.....	54
52. THE TRACTION AND POWER.....	55
53. ACTION OF CONTROLS.....	56

2. CIRCULAR DESCENT

54. GENERAL CONSIDERATIONS.....	58
55. EQUATIONS OF MOTION.....	59
56. RELATIONS BETWEEN ANGLES USED.....	60
57. OTHER FORM OF EQUATIONS OF MOTION.....	61
58. IDENTITY OF TWO FORMS OF EQUATIONS OF MOTION.....	62
59. DETERMINATION OF ANGLES SPECIFYING MOTION.....	63-65
60. THE VELOCITY.....	66

CHAPTER V. THE PROPELLER

61-64. GENERAL CONSIDERATIONS.....	69, 70
65. GEOMETRICAL PITCH.....	71
66-68. THE THRUST AND POWER.....	74-76
69. EFFICIENCY.....	77
70. EFFECT OF ALTITUDE.....	77
71, 72. GRAPHS OF PROPELLER COEFFICIENTS.....	78
73. MOTOR DIAGRAM.....	81
74-78. ADAPTATION OF MOTOR-PROPELLER GROUP TO MACHINE.....	82-85
