P R E F A C E.

IN the First Part of this work I have endeavoured to set before the beginner of Popular Astronomy the theories connected with that sublime science in such a manner that he may most easily retain them.

The Second Part contains the proofs of the formulæ on which the investigations following depend, and is arranged in such a manner as to be rendered profitable to any one who possesses a fair knowledge of Euclid, Algebra, &c.

I therefore lay this work before my fellow labourers in education, earnestly hoping that it may prove useful.
