MANUAL OF MECHANICS

MANUAL

MECHANICS.

THE REV. JOSEPH A. GALBRAITH, M. A.,

AND REVENUES -MILLS, SECONDARIES ON PAINLEY COUTTON!

AND REVENUES -MILLS, SECONDARIES ON PAINLEY COUTTON!

THE REV. SAMUEL HAUGHTON, M.A., F.R.S., FELLOW OF INDIFFT COLLEGE,
AND PROFESSOR OF GEOLOGY IN THE UNIVERSETT OF DUM.D.

FIFTH EDITION.

NINTH THOUSAND.

LONDON:

LONGMAN, BROWN, GREEN, LONGMANS, & BOREST'S. 1860.

186. c. 18.

Printed at the University Press, Br R. R. GILL.

CONTENTS.

PAG	Z.
MTRODUCTION,	1
STATICS.	
· ·	
CHAPTER I.	
ON PORCES MERITING AT A POINT.	
Direction of a Force.—2. Magnitude of a Force.—3. Repre- bentation of Forces by Lines.—4. Composition of Forces.— 5. Duchayla's Proof of the Composition of Forces.—6. The Principle of Moments,	2
 Composition of Parallel Forces.—2. Archimedes' Proof of the Composition of Parallel Forces.—3. Principle of Moments.— Centre of Parallel Forces.—5. Centre of Gravity, CHAPTER III. 	21
ON MACHINES IN EQUILIBRIUM.	
 Principle on which Equilibrium of Machines is determined.— The Lever.—3. The Whoel and Axle.—4. The Inclined Plane.—5. The Moveable Inclined Place.—6. The Screw.— The Pulley. 	46

CHAPTER IV.

ON THE EQUILIBRIUM OF PORCES IN A PLANE.
1. Equilibrium of two Forces in a Plane.—2. Equilibrium of three or more Forces meeting at a Point,—3. On the Transference of Forces in a Plane.—4. On the Equilibrium of Pairs or Twists.—5. Equilibrium of three or more Forces in a Plane, not meeting in the same Point, 62
DYNAMICS.
CHAPTER I,
DEFINITIONS AND LAWS OF MOTION.
 Motion, or Velocity.—2. Quantity of Matter and Motion.— Composition of Velocities.—4. Laws of Motion, 69
CHAPTER II.
ON THE WORK DONE BY AGENTS OR MACHINES MOVING UNIFORMLY.
1. Work done by a Force2. Constancy of Work done by a

Force in a Machine moving uniformly.-3. The Lever moving uniformly .-- 4. The Wheel and Axle moving uniformly. -5. The Inclined Plane.-6, The Pulley.-7. The Gain

CHAPTER III.

-	- Statement Statement of the		CONTRACT A NEW	DADATE
un.	RECTILINEAR	MOTION AND	CUMBIABL	FURUE

r. Relation between Velocity and Time.—2. Relation between Space and Time.—3. Relation between Velocity and Space.
—4. Motion of Falling Bodies.—5. Motion of Bodies on Inclined Planes.—6. Experimental Proofs of the Laws of Rectilinear Motion.

CHAPTER IV.

ON UNIFORM CIRCULAR MOTION.

1. Centrifugal Force .- 2. Diurnal Rotation of the Earth, . . . 116

CHAPTER V.

ON THE PENDULUM.

Motion of a Body down a System of Inclined Planes.—2.
 Velocity acquired by a Heavy Body in falling down a Circular Arc.—3. Time of falling down a Circular Arc.—4. The Simple Pendulum.—5. Acceleration due to Change of Place.—6. Acceleration due to Change of Length, . . . 125

CHAPTER VI.

ON THE COLLISION OF BODIES.

1. Elasticity of Bodies.—2. Impact of Bodies upon Plane Obstacles.—3. Collision of Bodies in Motion.

CHAPTER VII.

ON PROJECTILES.

1. Motion of a heavy Body projected obliquely.—2. Expression for the Direction and Velocity.—3, Time of Flight on a Horizontal Plane.—4. Range on a Horizontal Plane.—5. Greatest Vertical Height over a Horizontal Plane.—6. Time of Flight on an Oblique ascending Plane.—7. Range on an Oblique descending Plane.—8. Time and Range on an Oblique descending Plane.—9. The Velocity and Augle of Projection of a Trajectory, two Points in which are given.—10. Velocity of Discharge.

Three Shillings, served. Three Shillings and Sixpence, Cloth, lettered.

This Edition is considerably enlarged, containing Duchayla and Archimedes' proofs of the Composition of Forces, and many additional problems.

MECHANICS.

INTRODUCTION.

MECHANICS is the science which treats of the effects of force, whatever may be the source or origin of that force. We are acquainted with two kinds of effects produced by force, viz., pressure and motion. For our knowledge of the first we are indebted to our muscular sense; the latter is made known to us by two of our senses, sight and touch. Mechanics is, therefore, naturally divided into two branches, which treat respectively of these two effects of force. The first branch of Mechanics, which treats of pressure, is called Statics; and the second branch, which treats of motion, is called Dynamics. We shall proceed, without further explanation or definition, to exhibit the elements of these two departments of Mechanics.
