tances from the coordinate planes shall be in a						. 17
ProblemA line being given by its projections, to						
tances from the coordinate planes shall be equi	at (Fig.	351.	With the second	100	#T7	. 18

CHAPTER III. LINES, PLANE FIGURES AND PLANES.

Parallel lines. 19 Problem.—Through a given point to pass a line parallel to a given line (Figs. 36, 37). 19 Intersecting lines. 20 Problem.—To determine the positions of lines in space whose projections are given. 20 Problem.—To determine the relative position of two lines when either or both lie in a plane perpendicular to GL (Figs. 41, 42). 21 Problem.—To determine the projections of any line connecting two given lines which intersect (Fig. 43). 21 Problem.—To determine the relative position of two lines whose projections do not intersect within the limits of the drawing (Figs. 44, 45). 22 Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the limits of the drawing (Fig. 49). 23 Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 27 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). 22 Problem.—To an incline to V at any given angle (Fig. 52). 24 Problem.—To an incline to V at any given angle (Fig. 52). 24 Problem.—To analyze the position of a plane given by its traces (Fig. 65). 27 Problem.—To make the position of a plane given by its traces (Fig. 65). 27 Problem.—To pass through a line in space a plane perpendicular to either codificulate plane (Figs. 64, 65). 27 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given the projections of line lying in a given plane, to find the other projection of a plane passing through two intersecting lines (Fig. 77, 78). 39 Problem.—Given the projection of a pla		PAGE
Intersecting lines. Problem.—To analyze the positions of lines in space whose projections are given, Problem.—To determine the relative position of two lines when either or both lie in a plane perpendicular to GL (Figs. 41, 42). Problem.—To determine the relative position of two lines when either or both lie in a plane perpendicular to GL (Figs. 41, 42). Problem.—To determine the projections of any line connecting two given lines which intersect (Fig. 43). Problem.—To determine the relative position of two lines whose projections do not in- tersect within the limits of the drawing (Figs. 44, 45). Problem.—To draw the projections of a line passing through a given point and inter- secting a given line, when either projection of the point of intersection lies beyond the limits of the drawing (Figs. 45). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to H at any given angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to W at any given angle (Fig. 52). Problem.—To analyze the position of a plane given by its traces (Fig. 63). Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine (Figs. 64, 64). Problem.—Given the projections of three points not in the same right line, to find any point of the plane being given by three points not in the same right li	Parallel lines,	19
Problem.—To analyze the positions of lines in space whose projections are given, Problem.—To determine the relative position of two lines when either or both lie in a plane perpendicular to GI. (Figs. 41, 42). Problem.—To determine the projections of any line connecting two given lines which intersect (Figs. 43). Problem.—To determine the relative position of two lines whose projections do not in- tersect within the limits of the drawing (Figs. 44, 45). Problem.—To draw the projections of a line passing through a given point and inter- secting a given line, when either projection of the point of intersection lies beyond the limits of the drawing (Figs. 46). Plane figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 26 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 27 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 51). 28 Problem.—To determine the projections of a circle the plane of which is perpendicular to the plane, serticals, and lines of greatest declivity (Figs. 60-6z). Notation of the plane. 27 Problem.—To analyze the position of a plane given by its traces (Fig. 63). 28 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64, 65). Problem.—Given three points not in the same right line, to find any point of the plane which they determine. 29 Problem.—Given the traces of a plane and the projections of any point in that plane, to find the other trace of a plane passing through two interse		19
Problem.—To determine the relative position of two lines when either or both lie in a plane perpendicular to GL (Figs. 41, 42). Problem.—To determine the projections of any line connecting two given lines which intersect (Fig. 43). 12 Problem.—To determine the projections of any line connecting two given lines which intersect within the limits of the drawing (Figs. 44, 45). 12 Problem.—To distance in the relative position of two lines whose projections do not intersect within the limits of the drawing (Figs. 44, 45). 12 Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the hunts of the drawing (Fig. 46). 12 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 12 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 13 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 14 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 15 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to H at any given angle (Fig. 51). 16 Problem.—To determine the projections of a circle the plane of which is perpendicular to the plane, (Figs. 53-59). 17 Problem.—To analyze the position of a plane given by its traces (Fig. 65), 18 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64-65). 19 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine (Figs. 65-71). 19 Problem.—Given one projection of a line lying in a given plane, to find the other trace of a plane and the projections of any point in that plane, to find the other trace of a plane and the projections of any point in that plane, to find the other trace of a plane and the projections of any point in that plane, to find the other trace (Fi		
plane perpendicular to GL (Figs. 41, 42). Problem.—To determine the projections of any line connecting two given lines which intersect (Fig. 43). Problem.—To determine the relative position of two lines whose projections do not intersect (Fig. 43). Problem.—To determine the relative position of two lines whose projections do not intersective thin the limits of the drawing (Figs. 44, 45). Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the limits of the drawing (Fig. 46). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To determine the projections of a circle the plane of which is perpendicular to the and inclines to V at any given angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to the plane, to the plane, 27 Problem.—To analyze the position of a plane given by its traces (Fig. 65). Problem.—To analyze the position of a plane given by its traces (Fig. 65). Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—Given there points not in the same right line, to find any point of the plane which they determine (Figs. 66-71). Problem.—Given note projections of a line lying in a given plane, to find the other projection of the plane being given by three points not in the same right line, to find any vertical or a horizontal, (2) of any vertical (Figs. 75, 76). Problem.—To pass		20
Problem.—To determine the projections of any line connecting two given lines which intersect (Fig. 43). Problem.—To determine the relative position of two lines whose projections do not intersect within the limits of the drawing (Figs. 44, 45). 22 Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the hunts of the drawing (Fig. 46). Plane figures (Figs. 47, 48). Plane figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 And inclines to II at any given angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to II and inclines to II at any given angle (Fig. 52). Horizontals, verticals, and lines of greatest declivity (Figs. 60-6a). Notation of the plane, Problem.—To analyze the position of a plane given by its traces (Fig. 63). 27 Problem.—To pass through a line in space a plane perpendicular to either codificate plane (Figs. 64-65). Problem.—Given there points not in the same right line, to find any point of the plane which they determine (Figs. 60-61). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine (Figs. 75, 76). Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 75, 76). Problem.—Given one projection of a line lying in a given plane, to find the other trace of a plane passing through two intersecting lines (Fig. 79), 30 Problem.—To pass a plane through three given points (Fig. 8a), 31 Problem.—To pass a plane through a given point and line, Problem.—To pass a plane through a given point and line, Problem.—To pass a plane through a given point and line, Prob		
Intersect (Fig. 43). Problem.—To determine the relative position of two lines whose projections do not intersect within the limits of the drawing (Figs. 44, 45). Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the hmits of the drawing (Fig. 46). Pana figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 26 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 27 Problem.—To find the projections of a circle the plane of which is perpendicular to the find inclines to the any given angle (Fig. 51). 28 Problem.—To determine the projections of a circle the plane of which is perpendicular to the find inclines to the any given angle (Fig. 53). 29 Planes (Figs. 55-59). 10 10 10 10 10 10 10 10 10 1		21
Problem.—To determine the relative position of two lines whose projections do not intersect within the limits of the drawing (Figs. 44. 45). Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the humsts of the drawing (Fig. 46). Plane figures (Figs. 47. 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). 26 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 51). 26 Problem.—To determine the projections of a circle the plane of which is perpendicular to the distribution of the projection of a circle the plane of which is perpendicular to the plane, 15 plane (Fig. 53). 27 Problem.—To determine the projections of a circle the plane of which is perpendicular to the plane, 26 plane (Fig. 53). 28 Problem.—To analyze the position of a plane given by its traces (Fig. 63). 29 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Fig. 64, 65). 29 Problem.—Given thee points not in the same right line, to find any point of the plane which they determine (Figs. 64, 65). 29 Problem.—Given one projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 29 Problem.—To pass a plane through three given points (Fig. 78), 30 Problem.—To pass a plane through three given points (Fig. 86), 31		
tersect within the limits of the drawing (Figs. 44, 45). Problem.—To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the hmits of the drawing (Fig. 46). Plane figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To did inclines to V at any given angle (Fig. 51). 26 Planes (Fig. 53-59). Problem.—To analyze the position of a plane given by its traces (Fig. 65). 27 Problem.—To analyze the position of a plane given by its traces (Fig. 65). 28 Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—Given three points not in the same right line, to find any point of the plane which they determine (Figs. 66-71). Problem.—Given the projections of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given not traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—To pass a plane through three given points of in the same right line, to find a vertical or a horizontal. (2) of any vertical (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80). 31 Problem.—To pass a plane through a given point and line. CHAPTER IV. L PARALLEL A		21
 Problem. — To draw the projections of a line passing through a given point and intersecting a given line, when either projection of the point of intersection lies beyond the limits of the drawing (Fig. 49). Plane figures (Figs. 47, 48). Problem. — To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem. — To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem. — To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem. — To find the projections of a circle parallel to the horizontal plane (Fig. 50). Problem. — To determine the projections of a circle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). Problem. — To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 51). Problem. — To determine the projections of a greatest declivity (Figs. 60-6π). Notation of the plane. Problem. — To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem. —Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). Problem. —Given the projections of three points not in the same right line, to find any point of the plane which they determine. Problem. —Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem. —Given one braces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem. —To pass a plane through three points not in the same right line, to find a vertical or a horizontal, Problem. —To pass a plane through three given points (Fig. 80). Problem. —To pass a plane through a given point and l		
secting a given line, when either projection of the point of intersection lies beyond the hunts of the drawing (Fig. 46). Plane figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 52). Planes (Figs. 53-59). 14 Horizontals, verticals, and lines of greatest declivity (Figs. 60-68). 15 Notation of the plane, Problem.—To analyze the position of a plane given by its traces (Fig. 63). 27 Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64-65). 28 Problem.—Given three points not in the same right line, to find any point of the plane (Figs. 60-61). 29 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine (Figs. 60-70). Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 75, 76). 29 Problem.—To plane being given by three points not in the same right line, to find any vertical or a horizontal, (2) of any vertical (Figs. 77, 78). 30 Problem.—To pass a plane through three given points (Fig. 80). 31 Problem.—To pass a plane through a given point and line, 21 Problem.—To pass a plane through a given point and line, 22 Problem.—To pass a plane through a given point and line, 23 Problem.—To pass a plane through a given point and line, 24 Problem.—To pass a plane through a given point and line, 25		32
the hmuts of the drawing (Fig. 46). Plane figures (Figs. 47, 48). Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 52). 26 Problem.—To determine the projections of a circle the plane of which is perpendicular to the fland inclines to V at any given angle (Fig. 52). 27 Planes (Figs. 53-59). 28 Horizontals, verticals, and lines of greatest declivity (Figs. 60-62). 29 Problem.—To analyze the position of a plane given by its traces (Fig. 65). 27 Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64-65). 28 Problem.—Given there points not in the same right line, to find any line of the plane which they determine (Figs. 60-71). 29 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection of the plane which they determine, 29 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 29 Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, (2) of any vertical (Figs. 75, 78). Problem.—To pass a plane through three given points (Fig. 80), 30 Problem.—To pass a plane through a given point and line, CHAPTER IV. L PARALLEL AND INTERSECTING PLANES. Parallel planes. 31 Problem.—To pass through a given point a plane parallel to a second line (Fig. 85), 33 Problem.—To pass driven intered from a plane parallel to a given plane (Fig. 85), 34 Problem.—To pass throu		
Plane (Figs. 37, 48). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 59). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 27 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 28 Problem.—To find the projections of a circle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). 29 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 52). Horizontals, verticals, and lines of greatest declivity (Figs. 60–6a). Notation of the planet, 20 Problem.—To analyze the position of a plane given by its traces (Fig. 65). 21 Problem.—To pass through a line in space a plane perpendicular to either codriduate plane (Figs. 64–51). 22 Problem.—Given there points not in the same right line, to find any point of the plane which they determine (Figs. 65–71). 23 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72–74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 24 Problem.—To plane being given by three points not in the same right line, to find a vertical or a horizontal. 25 Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). 26 Problem.—To pass a plane through three given points (Fig. 8), 37 Problem.—To pass a plane through a given point and line, 27 Problem.—To pass a plane through a given point and line, 28 Problem.—To pass a plane through a given point and line, 29 Problem.—To pass a plane Through a given point a plane parallel to a second line (Fig. 84), 38 Problem.—To pass through a given point a plane parallel to a second line (Fig. 85), 39 Problem.—To pass through a g		
Problem.—To find the projections of any plane figure parallel to the vertical plane (Fig. 49). Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 24 Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 25 Problem.—To find the projections of a circle parallel to give which is perpendicular to V and inclines to V at any given angle (Fig. 51). 26 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 52). 27 Planes (Figs. 53-59). 28 Planes (Figs. 53-59). 29 Problem.—To analyze the position of a plane given by its traces (Fig. 65). 29 Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64-65). 29 Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). 29 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). 29 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, 20 Problem.—To pass a plane through three given points (Fig. 80). 30 Problem.—To pass a plane through a given point and line, 21 Problem.—To pass a plane through a given point and line, 22 Problem.—To pass a plane through a given point a plane parallel to a given plane (Fig. 84). 31 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 32 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 33 Problem.—To pass through a given point a plane parallel to		
Froblem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a rectangle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). 24 Problem.—To determine the projections of a circle the plane of which is perpendicular to V and inclines to V at any given on the plane of which is perpendicular to H and inclines to V at any given on the plane of which is perpendicular to H and inclines to V at any given on gle (Fig. 52). 25 Problem.—To determine the projections of a circle the plane of which is perpendicular to the plane, (Fig. 53-59). 26 Horizontals, verticals, and lines of greatest declivity (Figs. 60-6n). 27 Problem.—To pass through a line in space a plane perpendicular to either codrolinate plane (Figs. 60-6n). 28 Problem.—To pass through a line in space a plane perpendicular to either codrolinate plane (Figs. 60-6n). 29 Problem.—Given thee points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). 29 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 29 Problem.—Given one trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). 20 Problem.—To pass a plane through three given points (Fig. 80), 21 Problem.—To pass a plane through three given points (Fig. 80), 22 Problem.—To pass a plane through a given point and line, 23 Problem.—To pass a plane through three given points (Fig. 80), 24 Problem.—To pass a plane through a given point and line, 25 Problem.—To pass a plane through a given point and line, 26 Problem.—To pass a plane through a given point and line, 27 Problem.—To pass a plane through a given point and		:43
Problem.—To find the projections of a circle parallel to the horizontal plane (Fig. 50). 23 Problem.—To find the projections of a cretangle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). 24 Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 52). 24 Planes (Figs. 53–59). 24 Planes (Figs. 53–59). 25 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64, 65). 27 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64, 65). 27 Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-571). 27 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given the projection of a line lying in a given plane, to find the other projection (Figs. 75–76). 39 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 39 Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, 30 Problem.—To pass a plane through three given points (Fig. 80). 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 43 CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass a plane passing through to a second line (Fig. 85). 33 Problem.—To pass a plane passing through to a second line (Fig. 85). 33		1250
Problem.—To find the projections of a rectangle the plane of which is perpendicular to V and inclines to V at any given angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to If and inclines to V at any given angle (Fig. 52). Problem.—To determine the projections of a circle the plane of which is perpendicular to If and inclines to V at any given angle (Fig. 52). 24. Horizontals, verticals, and lines of greatest declivity (Figs. 60–6x). 25. Problem.—To peas through a line in space a plane perpendicular to either coordinate plane (Figs. 64,65). 27. Problem.—To peas through a line in space a plane perpendicular to either coordinate plane (Figs. 64,65). 28. Problem.—Given there points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). 29. Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine. 29. Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). 29. Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 29. Problem.—Given one trace of a plane and the projections of any point in that plane, to find a vertical or a horizontal, 29. Problem.—To pass a plane through three given points (Fig. 80). 29. Problem.—To pass a plane through a given point and line. Problem.—To pass a plane through a given point and line. CHAPTER IV. L PARALLEL AND INTERSECTING PLANES. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85). 31. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85). 33. Problem.—To pass diven inter to pass a plane parallel to a given plane (Fig. 85). 34. Problem.—To pass diven point a plane parallel to a given plane (Fig. 85).		
V and inclines to JT at any given, angle (Fig. 51). Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given ongle (Fig. 52). Planes (Figs. 53-59). 24. Planes (Figs. 53-59). 25. Notation of the plane. Problem.—To analyze the position of a plane given by its traces (Fig. 63). 27. Problem.—To analyze the position of a plane given by its traces (Fig. 63). Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—Given one trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 76). Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79), 30. Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79), 31. Problem.—To pass a plane through three given points (Fig. 80), 31. Problem.—To pass a plane through a given point and line, 31. Problem.—To pass a plane through three given points (Fig. 80), 31. CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass a plane through a given point a plane parallel to a given plane (Fig. 84), 33. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33.		2,3
Problem.—To determine the projections of a circle the plane of which is perpendicular to H and inclines to V at any given angle (Fig. 52). Planes (Figs. 53–59). 10 rizontals, verticals, and lines of greatest declivity (Figs. 60–62),		
to H and inclines to V at any given angle (Fig. 52), Planes (Figs. 55-59). 24 Horizontals, verticals, and lines of greatest declivity (Figs. 66-6n), 26 Notation of the planet, 26 Problem.—To analyze the position of a plane given by its traces (Fig. 65), 27 Problem.—To analyze the position of a plane given by its traces (Fig. 65), 27 Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64-65), 27 Problem.—Given three points not in the same right line, to find any line of the plane which they determine, 27 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). 39 Problem.—Given one traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 39 Problem.—To plane being given by three points not in the same right line, to find a vertical or a horizontal, 30 Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). 30 Problem.—To pass a plane through three given points (Fig. 86), 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through a given point and line, 32 Problem.—To pass through a given point and line, 34 Problem.—To pass through a given point and line, 34 Problem.—To pass a plane through a given point and line, 32 Problem.—To pass a plane through three given points of given point given point given point given point given point given point given g	P and inclines to 27 at any given angle (Fig. 51),	23
Planes (Figs. 53-59). Planes (Figs. 53-69). Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64, 65). Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75-76), Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77-78). Problem.—To pass a plane through three given points (Fig. 80), Problem.—To pass a plane through three given points (Fig. 80), Problem.—To pass a plane through a given point and line, Problem.—To pass a plane through a given point and line, CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Or pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85).		
Horizontals, verticals, and lines of greatest declivity (Figs. 60-6a),		200.00
Notation of the plane, Problem.— To analyze the position of a plane given by its traces (Fig. 63), 27 Problem.— To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64, 65). 27 Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 66, 65). 28 Problem.—Given there points not in the same right line, to find any line of the plane which they determine (Figs. 66, 67-11). 29 Problem.—Given no projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given noe projection of a line lying in a given plane, to find the other projection (Figs. 75-74). Problem.—Given traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, 29 Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80). 31 Problem.—To pass a plane through a given point and line, 32 Problem.—To pass a plane through a given point and line, 33 CHAPTER IV. 14 15 16 17 17 18 18 19 19 19 19 19 19 19 19		
Problem.—To analyze the position of a plane given by its traces (Fig. 62). Problem.—To pass through a line in space a plane perpendicular to either coordinate plane (Figs. 64,65). Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine. Problem.—Given no projection of a line lying in a given plane, to find the other projection (Figs. 72-74). 29 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, Problem.—To plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80), Problem.—To pass a plane through a given point and line, Problem.—To pass a plane through a given point and line, Problem.—To pass a plane through three given points (Fig. 83), CHAPTER IV. L PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85), 33 Problem.—To pass diven line to pass a plane parallel to a given plane (Fig. 85), 34 Problem.—To pass diven line to pass a plane parallel to a second line (Fig. 85), 35		
Problem.—To pass through a line in space a plane perpendicular to either coördinate plane (Figs. 64.65). Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, Problem.—Given noe projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through a given point and trace (Fig. 80). Problem.—To pass a plane through a given point and trace by a change of ground-line (Figs. 81-83). CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 33 Problem.—To pass a plane Through a given point a plane parallel to a given plane (Fig. 84). 34 Problem.—To pass a plane Through a given point a plane parallel to a given plane (Fig. 84).		
plane (Figs. 64, 65). **Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 66-71). **Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, **Problem.—Given the projections of a line lying in a given plane, to find the other projection (Figs. 72-74). **Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). **Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, **Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). **Problem.—To pass a plane through three given points (Fig. 80). **Problem.—To pass a plane through a given point and line. **Problem.—To pass a plane through a given point and line. **CHAPTER IV.** **L PARALLEL AND INTERSECTING PLANES.** **Parallel planes.** **Land Intersecting Planes.** **Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). **33 **Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). **34 **Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85). **35 **Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85). **36 **37 **Problem.—To pass through a given point a plane parallel to a second line (Fig. 85). **38 **39 **30 **Problem.—To pass through a given point a plane parallel to a second line (Fig. 85). **31 **31 **32 **32 **33 **34 **34 **34 **35 **35 **35 **36 **36 **36 **37 **37 **36 **37 **38 **38 **38 **38 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **39 **30		-/
Problem.—Given three points not in the same right line, to find any line of the plane which they determine (Figs. 65-7). Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine (Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72-74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, 30 Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79), 30 Problem.—To pass a plane through three given points (Fig. 80), 31 Problem.—To pass a plane through a given point and line, 31 Problem.—To pass a plane through three given points (Fig. 80), 31 CHAPTER IV. L PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a second line (Fig. 84), 33		27
which they determine (Figs. 60-71). 27 Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine, 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 75-74). 29 Problem.—Given to traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75,76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, (3) Problem.—To fiven one trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80). 21 Problem.—To pass a plane through a given point and line, 31 Problem.—Given a plane by its traces, to determine a new vertical trace by a change of ground-line (Figs. 81-83). 32 CHAPTER IV. 33 CHAPTER IV. 34 STARALLEL AND INTERSECTING PLANES. Parallel planes. 35 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 36 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85). 37 Problem.—To pass upper through a given point a plane parallel to a second line (Fig. 85).		
Problem.—Given the projections of three points not in the same right line, to find any point of the plane which they determine. 29 Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72–74). 30 Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). 30 Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal. 30 Problem.—To find the traces of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). 30 Problem.—To pass a plane through three given points (Fig. 89), 31 Problem.—To pass a plane through three given points (Fig. 89), 32 Problem.—To pass a plane through a given point and line, 33 Problem.—To pass a plane through three given points (Fig. 89), 34 CHAPTER IV. 35 L PARALLEL AND INTERSECTING PLANES. 36 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 37 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 38 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 39 Problem.—To pass diven line to pass a plane parallel to a second line (Fig. 85), 30 Problem.—To pass diven line to pass a plane parallel to a second line (Fig. 85),		22
point of the plane which they determine, Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 72–74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal. Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal. Problem.—To find the trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80). Problem.—To pass a plane through a given point and line, Given a plane by its traces, to determine a new vertical trace by a change of ground-line (Figs. 81-83). CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 33 Problem.—To pass through a given point a plane parallel to a second line (Fig. 85).		.,
Problem.—Given one projection of a line lying in a given plane, to find the other projection (Figs. 73–74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, (3) of any vertical or a horizontal, (5) of the plane being given by three points not in the same right line, to find a vertical or a horizontal, (6) of the problem.—To pass a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To pass a plane through three given points (Fig. 80), 31 Problem.—To pass a plane through a given point and line, (7) Froblem.—To pass a plane through a given point and line, (8) of the problem.—To pass a plane through a given point and line, (8) of the problem.—To pass through a given point (8) of the problem.—To pass through a given point (8) of the problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a given plane (Fig. 85), 33		20.
lection (Figs. 72-74). Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal,	Problem.—Given one projection of a line lying in a given plane to find the other pro-	
Problem.—Given the traces of a plane, to find the projections (1) of any horizontal, (2) of any vertical (Figs. 75,76), Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, Problem.—To prive note trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79), 30 Problem.—To pass a plane through three given points (Fig. 80), 31 Problem.—To pass a plane through a given point and line, Problem.—Given a plane by its traces, to determine a new vertical trace by a change of ground-line (Figs. 81-83), CHAPTER IV. L PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—To pass through a given point a plane parallel to a second line (Fig. 85), 33		20.
(2) of any vertical (Figs. 75, 76). Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal, Problem.—Given one trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79), Problem.—To pass a plane through three given points (Fig. 89), Problem.—To pass a plane through a given point and line, Problem.—Given a plane by its traces, to determine a new vertical trace by a change of ground-line (Figs. 81-83), CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84), 33 Problem.—Through a given line to pass a plane parallel to a second line (Fig. 84), 33		-9
Problem.—The plane being given by three points not in the same right line, to find a vertical or a horizontal. Problem.—Oliven one trace of a plane and the projections of any point in that plane, to find the other trace (Figs. 77, 78). Problem.—To find the traces of a plane passing through two intersecting lines (Fig. 79). Problem.—To pass a plane through three given points (Fig. 80). Problem.—To pass a plane through a given point and line, Given a plane by its traces, to determine a new vertical trace by a change of ground-line (Figs. 81-83). CHAPTER IV. I. PARALLEL AND INTERSECTING PLANES. Parallel planes. Problem.—To pass through a given point a plane parallel to a given plane (Fig. 84). 33 Problem.—To pass through a given point a plane parallel to a second line (Fig. 85). 33		20.
