	PAGE
“Dear Miss Harmony Hall, will you go to the theater with me?” he asked, earnest in spite of his attitude <i>Frontispiece</i>	
“Bombard me instead of the poets, Gappy,” said Harmony, cheerily. “I think I have an answer to some of your questions”	8
She found him in a far corner, his head hidden in the saddle of a battered rocking horse	34
“Would you call a zephyr scarf a ‘fluf-fy business’?” hissed Miss Mallory	110
“Signed by Surrey,” said Gappy executively	148

the 1990s, the number of people with a disability in the United States has increased by 25% (U.S. Census Bureau 2000).

As a result of the increase in the number of people with a disability, the need for accessible information has become more acute. The Americans with Disabilities Act (ADA) of 1990 has been the primary legislative force behind the development of accessible information. The ADA requires that information be accessible to people with disabilities. This has led to the development of accessible information technologies (AIT) such as screen readers, Braille displays, and large print displays.

While AIT has made significant progress, there is still a need for more accessible information. This is because many people with disabilities are still unable to access information.

One of the reasons for this is that many people with disabilities are unable to use AIT. This is because AIT is often expensive and difficult to use. In addition, many people with disabilities are unable to access information because it is not available in an accessible format.

One of the ways to address this problem is to develop more accessible information. This can be done by developing AIT that is more user-friendly and less expensive.

Another way to address this problem is to make information available in an accessible format. This can be done by providing information in Braille, large print, or audio format.

Finally, it is important to ensure that people with disabilities are able to access information. This can be done by providing training and support for people with disabilities.

By addressing these issues, we can ensure that all people have access to the information they need.

There are many ways to address the need for accessible information. This paper will discuss some of the ways to address this need.
