PREFACE.

IN order to insure uniformity of results in the testing of cement, it is essential that each test should invariably be made in precisely the same manner and under exactly the same conditions. A committee of the American Society of Civil Engineers has, with this aim in view, prepared and published a set of Standard Methods of Testing Cement, and these methods are to-day employed throughout the United States.

This little volume, as its name implies, is a laboratory manual on cement testing, and is intended to assist in bringing about uniformity in the testing of cement. The authors have endeavored to present, in a somewhat condensed form, such directions as will enable a student in the laboratory or an operator in the field office to correctly interpret the Standard Methods of Testing and Specifications for Cement as published by the committee of the American Society of Civil Engineers, American Society for Testing Materials, Association of American Portland Cement Manufacturers, and the American Railway Engineers and Maintenance of Way Association; they have endeavored to give sufficient detail to enable all students to learn the same manipulations and thus be able to perform each test in a certain well defined and similar manner.

All of the tests described have been performed in the laboratory under the eyes of the writers and have been found to produce uniformly good results.

Acknowledgment has been made to various authorities on the subject by special mention or as references at the end of the several chapters.

Any corrections or suggestions will be gratefully received.

CONTENTS.

PART I.

INTRODUCTION.....	PAGE ix
-------------------	------------

CHAPTER I.

CLASSIFICATION, COMPOSITION, MANUFACTURE.

Definition — Classification — Portland — Natural — Pozzuolana — Mixed — Distinguishing Features — Composition — Silica — Lime — Alumina — Iron Oxide — Magnesia — Sulphuric Acid — Sulphur — Alkalies — Carbonic Acid — Manufacture — Raw Materials — Cement Rock — Limestone — Marl — Clay — Chalk — Alkali Waste — Mixing (Wet Process, Dry Process) — Kilns (Stationary, Rotary) — Grinding — References.....	1
--	---

CHAPTER II.

SAMPLING.

Storage — Collecting the Sample — Sample Cans — References..	7
--	---

CHAPTER III.

FINENESS.

Importance — Method — Apparatus (Sieves, Scales) — To Make the Test — Results — Deductions — References.....	9
--	---

CHAPTER IV.

SPECIFIC GRAVITY.

Definition — Significance — Apparatus (Le Chatelier Specific Gravity Flask, Funnel, Chemical Balance) — To Make the Test — Calculation — Cleaning the Flask — Conclusion — References ...	14
---	----

CHAPTER V.

NORMAL CONSISTENCY, MIXING, TIME OF SET.

	PAGE
Significance — Standard — Apparatus (Vicat Apparatus, Scales, Burette) — Mixing — To Make the Test — Time of Set — Significance — To Make the Test — Conclusions — References	20

CHAPTER VI.

CONSTANCY OF VOLUME.

Significance — Kinds of Tests (Normal, Accelerated) — Apparatus (Boiling Apparatus) — To Make the Tests — Conclusions — References	28
--	----

CHAPTER VII.

TENSILE STRENGTH.

Use — Factors Affecting Strength — Composition — Fineness — Amount of Water — Apparatus (Molds, Testing Machines) — To Make the Tests (Neat Cement) — To Make the Test (Mortar) — Determine the Percentage of Water — Method of Mixing — Breaking (Briquettes) — Conclusions — References	33
---	----

CHAPTER VIII.

COMPRESSIVE STRENGTH AND TRANSVERSE TESTS.

Compressive Strength — Molds — To Make the Test (Neat, Mortar) — Breaking — Conclusions — Transverse Tests (Modulus of Rupture) — Molds — To Make the Test — Breaking — Calculations — Conclusions — References	41
---	----

CHAPTER IX.

SAND AND STONE.

Sand — Test of Natural Sand — Per Cent of Loam — Mechanical Analysis — Apparatus — To Make the Test — The Uniformity Coefficient — The Effective Size — To Find the Uniformity Coefficient and Effective Size — Voids — Apparatus — To Make the Test — Stone — Mechanical Analysis (Apparatus, To Make the Test) — Voids (Apparatus, Specific Gravity, To Make the Test) — References	49
---	----

CONTENTS

vii

CHAPTER X.

LABORATORY EQUIPMENT.

	PAGE
Special Apparatus — Machines (Tension Test) — Long Lever — Shot — Spring Balance — Clips — Transverse Tool — Compression Tool — Universal Testing Machine — Sand Shaker — Scales and Balance — Boiling Apparatus — Moist Closet — Storage — Tanks — Table — Burette — Molds (Briquette, Cube, Bar) — Miscellaneous Apparatus.....	63

PART II.

INTRODUCTION

Part played by Chemical Analysis; Preparation of Sample for Analysis.....	80
---	----

ANALYSIS OF CEMENT

Determination of Loss on Ignition — Silica (SiO_2) — Iron and Alumina (Fe_2O_3 and Al_2O_3) — Lime (CaO) — Magnesia (MgO) — Sulphuric Acid (SO_3) — Total Sulphur (S) — Sulphur as Sulphide (S) — Moisture — Alkalies (K_2O and Na_2O) — Carbon Dioxide (CO_2).....	84
--	----

ANALYSIS OF LIMESTONE.....	106
----------------------------	-----

ANALYSIS OF MARL.....	107
-----------------------	-----

ANALYSIS OF SLAG.....	107
-----------------------	-----

ANALYSIS OF CLAY.....	107
-----------------------	-----
