1851.

HIS GRACE THE DUKE OF NORTHUMBERLAND,

THIS RESAT ON THE

IMPROVEMENT OF THE TYNE,

WHICH, FROM ITS SOURCE TO THE SRA, PASSES SC EXTENSIVELY THROUGH

HIS GRACE'S POSSESSIONS;

AND IN DEVELOPING WHOSE NAVIGABLE FACILITIES HIS GRACE

BVINCES SO MUCH INTEREST AND KNOWLEDGE,

IS, WITH PERMISSION, RESPECTFULLY DEDICATED, BY HIS GRACE'S

VERY OBLIGED AND OBEDIENT SERVANT,

THE AUTHOR.

e g

**

The improvement of the Tyne is a topic so much agitated of late, that it might seem, there can hardly remain an opening for its further discussion. It is, however, an irksome, and not always a satisfactory task, to gather results from masses of evidence, often of a contradictory character, and from which, as well as from other sources, we fail, perhaps, at last, to elicit fixed rules or principles, enabling us to substitute fact and certainty for conjecture or opinion.

It is for the purpose of inquiring whether such fixed principles do really exist, and if so, in what manner they admit of a practical application, that the following essay has been written.

The views advanced are illustrated by diagrams, and, it is hoped, are explained with sufficient clearness to render further prefatory remarks unnecessary.)

45

CONTENTS.

CHAP. L
Introductory—Materials of River Bods
CHAP. II.
Fall of River Beds—The Flood State, the really Governing State of Rivers— Pools and Streams—Elementary Forms of River Beds—The various Actions all traceable back to a Vertical Action—Actions on the Bottom and on the Banks, are alternate Actions
CHAP. III.
Examples of the Power of Running Water—Fall of Rain—Extent of River
Basins — General character of Northumberland Rivers — Floods— Rivers of Australia—Rivers of America
CHAP. IV.
Resistance—Absorbs much the greatest Proportion of the Power of Running
Water - Varies with Volume - Terms of - Examples - Velocities
required to transport Materials—Relative Velocities at Surface and
Bottom-Illustrations-Glacis-like Form of River Sections-Flood
Heights of Rivers-River Beds must be adapted to convey very
variable Volumes of Water—Experiments

viii.

CHAP. V.
Structure of River Beds-Lake Basins along Lines of existing River
Courses — Haugh Grounds — Sinuosities — Formation of Islands —
Bifurcations-Deltas-Power of Currents to raise themselves to a
higher level, illustrated by Tidal Action
CHAP. VI.
Principles deduced—Non-elasticity of Water—Bed of Tyne from Bill Point
to Collingwood Memorial—River Beds require regulation—Are to be
taken as a whole-Lateral receptacles injurious-Jarrow Slake-
Necessity of Solid Banks-What portions of the River are the least
necessary to be interfered with
CHAP. VII.
General Conclusions-Lowering of the Outfall-Piers-Herd Sand-
Narrows-Velocity of Tidal Wave-Attainable Velocity of Tidal
Wave in the Tyne-Lines of Improvement-Distribution of Tidal
Water-Resistence of Tyne Bridge-Upper Tidal portion of River-
Summary
