## N O T E

THIS book is intended for those who have felt the need of a varied collection of alphabets of standard forms, arranged for convenient use.

The alphabets illustrated, while primarily intended to exhibit the letter shapes, have in most cases been so arranged as to show also how the letters compose into words, except in those instances where they are intended to be used only as initials. The application of classic and medieval letters to modern usages has been, as far as possible, suggested by showing modern designs in which similar forms are employed.

In view of the practical aim of this treatise it has been deemed advisable to include a larger number of illustrative examples rather than to devote space to the historical evolution of the letter forms.

To the artists, American and European, who have so kindly furnished him with drawings of their characteristic letters—and without whose cordial assistance this book would hardly have been possible—to the master-printers who have allowed him to show types specially designed for them, and to the publishers who have given him permission to borrow from their books and magazines, the author wishes to express his sincere obligations.
