## PREFACE

The corrosion of iron and steel is one of the leading questions of the day among engineers, metallurgists and manufacturers. Information on the subject is widely scattered and its value is thereby greatly reduced.

This essay is based on a paper read before the Engineers' Society of Western Pennsylvania, at Pittsburgh, December 15, 1908, and published in the Proceedings.

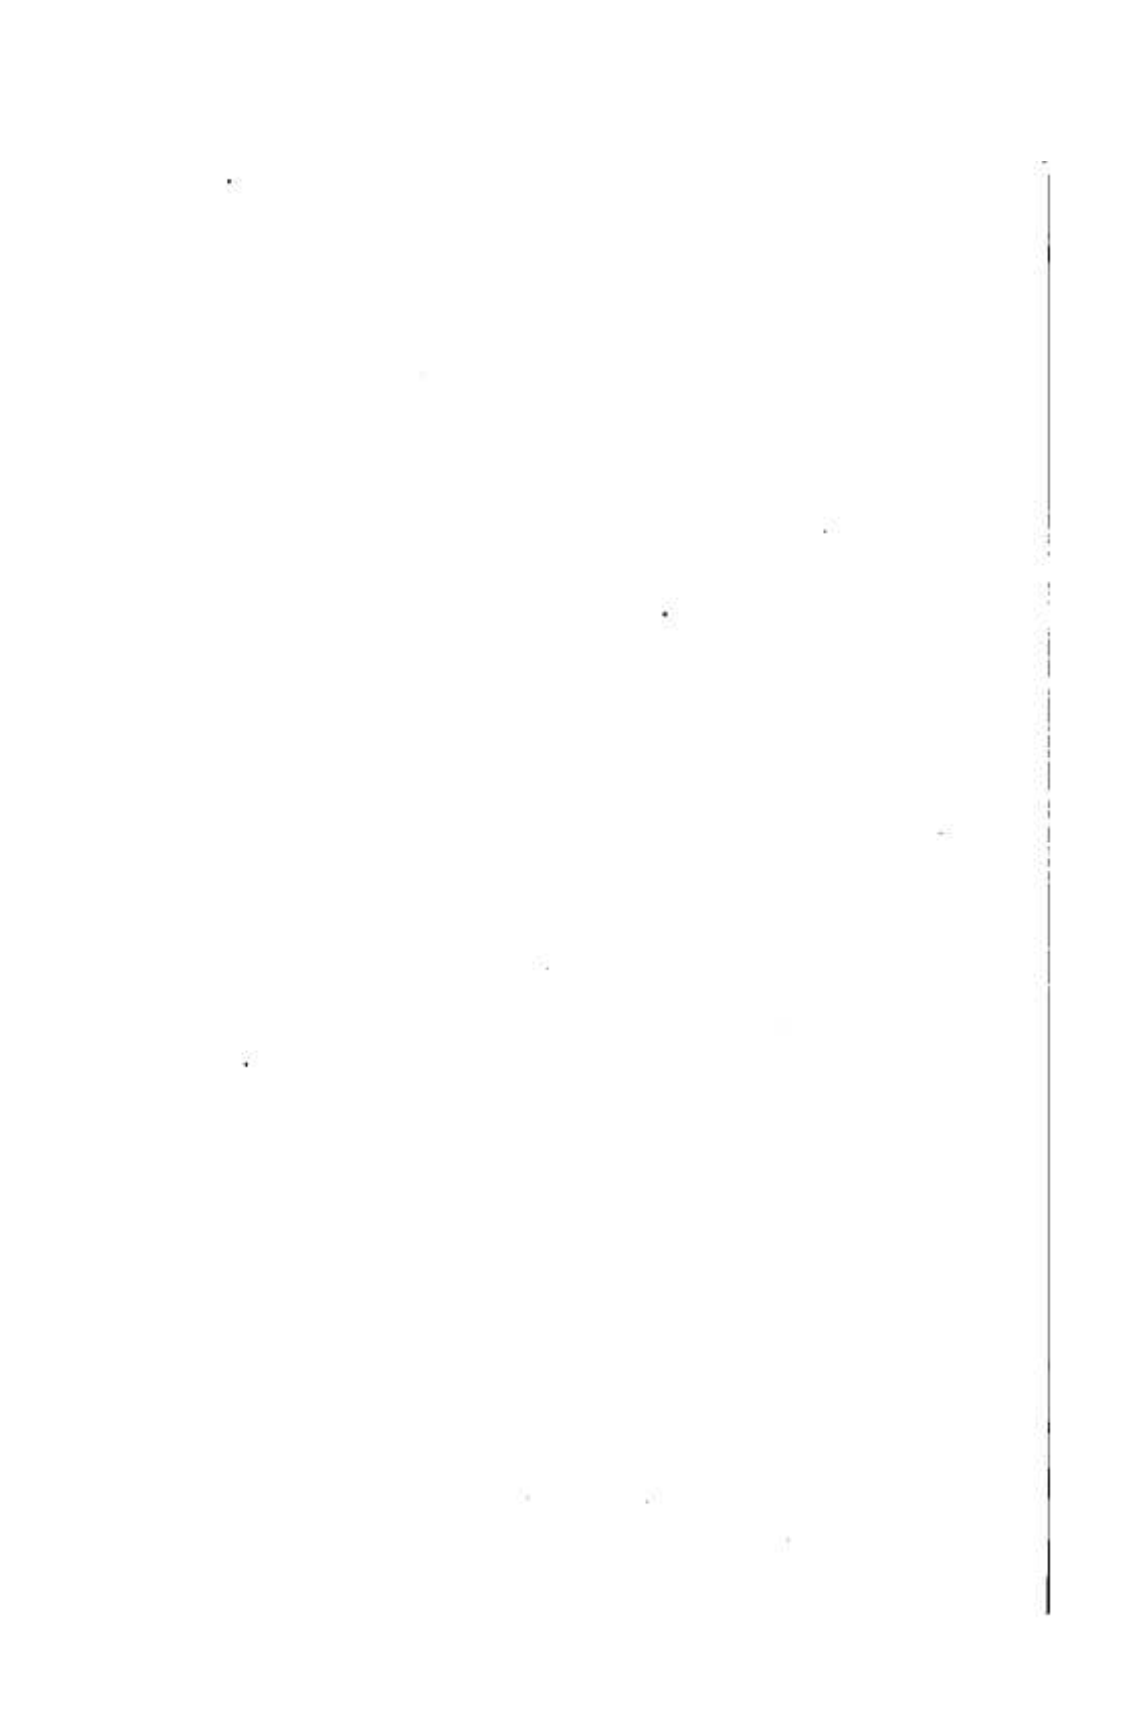

The work is in great measure a compilation and study of the results obtained by other investigators and is intended as a compendium of the subject suitable for reference.

I am indebted to Mr. Harrison W. Craver for the free use of the extremely valuable bibliography of the subject published by the Carnegie Library of Pittsburgh, which is reproduced in condensed form at the end of the volume.

## CONTENTS.

	Page
Preface .....	v
The Decay of Iron.....	1
Composition of Rust.....	3
Formation of Rust.....	6
Carbonic Acid Theory.....	9
Hydrogen Peroxide Theory.....	13
Electrolytic Theory.....	14
The Solution of Iron in Water.....	22
Action of Hydrogen and Occluded Gases.....	27
The Function of Oxygen.....	36
The Difference between Iron and Steel.....	38
The Structure of Iron and Steel.....	40
Relation of Structure to Corrosion.....	42
Effect of Stress on Corrosion.....	45
Comparative Corrosion of Iron and Steel.....	49
Influence of Modern Conditions.....	60
Corrosion in Air.....	62
Corrosion in Fresh Water.....	63
Corrosion in Salt Water.....	65
Corrosion of Rails.....	70
Corrosion of Tubes.....	73
Corrosion of Wire and Sheets.....	78
Influence of the Impurities in the Metal.....	81
Comparative Corrosion of Acid and Basic Steels....	87
Influence of the Electric Current.....	88
Iron and Steel Embedded in Concrete.....	89
The Inhibition of Rusting.....	95
References .....	102
General Bibliography .....	105
Authorities Quoted .....	viii
