CLINICAL REMARKS ON GLEET:
ITS CAUSES AND TREATMENT.

DELIVERED IN THE ABERDEEN ROYAL INFIRMARY

BY

J. C. OGILVIE WILL, M.D.,

SURGEON TO THE ABERDEEN ROYAL INFIRMARY, LECTURER ON CLINICAL SURGERY,
FORMERLY EXAMINER IN SURGERY IN THE UNIVERSITY OF ABERDEEN.

*"It has been sagely remarked by Thiry that everything earthly has an
end, even Gleet."*—VAN BUREN.

LONDON:
J. & A. CHURCHILL, NEW BURLINGTON STREET.
1879.

160. f. 73.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that proper record-keeping is essential for transparency and accountability, particularly in the context of public administration and financial management.

2. The second part of the document outlines the various methods and tools used to collect, store, and analyze data. It highlights the need for robust systems that can handle large volumes of information while ensuring data integrity and security. The text also mentions the role of technology in streamlining these processes and reducing the risk of human error.

3. The third part of the document focuses on the challenges associated with data management, such as data silos, inconsistent formats, and limited access. It suggests that organizations should adopt a data-driven culture and invest in training to ensure that all staff are equipped to handle and interpret data effectively. Additionally, it stresses the importance of regular audits and updates to data management policies.

4. The fourth part of the document discusses the ethical implications of data collection and analysis. It notes that while data can provide valuable insights, it must be handled responsibly to protect individual privacy and prevent misuse. The text advocates for the implementation of strict data protection regulations and the establishment of clear guidelines for data usage.

5. The fifth part of the document concludes by summarizing the key points and offering recommendations for future action. It encourages organizations to continue to refine their data management practices and stay abreast of the latest technological advancements. The text also suggests that collaboration between different departments and stakeholders is crucial for achieving a unified and effective data management strategy.

PREFACE.

IN the following pages an attempt has been made to bring together, in a short and concise form, the more modern views regarding gleet and its treatment, as given by recent authorities on the subject, more especially Van Buren and Keyes, Bumstead, Berkeley Hill, Ch. Phillips, and Otis. No originality is claimed, as the remarks are merely a compilation prepared from the works of the above-mentioned authors for use in clinical teaching; but as considerable experience in the treatment of cases of the kind has shown the writer that the mode of examination and the methods of treatment inculcated are both satisfactory and efficient, it occurred to him that this short resumé might prove of use to those among his medical brethren who are not familiar with the more recent utterances of authorities on Venereal Disease.

On this account, he has reprinted the lecture from the *Edinburgh Medical Journal*, with some additional annotations in order to make the paper more complete; and a lithographic plate has been introduced for the

purpose of rendering the description of the instruments given in the text more intelligible to those who may wish to follow out the treatment suggested, but who may not be acquainted with all the appliances referred to.

ABERDEEN, *May*, 1879.
