# MATHEMATICAL QUESTIONS AND SOLUTIONS; VOL. XIII

### MATHEMATICAL QUESTIONS,

WITH THEIR

### SOLUTIONS,

FROM THE "EDUCATIONAL TIMES,"

WITH MANY

Papers and Solutions not gublished in the "Chuentional Cimes."

HDITED BY

W. J. MILLER, B.A.,

MATRIMATICAL MASTER, MUDDISSPIRAD COLLEGE.

VOL. XIII.

FROM JANUARY TO JUNE, 1870.

LONDON:

C. F. HODGSON & SON, GOUGH SQUARE, FLEET STREET.

1870.

LONDON:
PRINTED BY C. P. HODGSON & SON,

#### CONTENTS.

	Mainematical Papers, &c.					
No.	Psg					
77.	Note on Question 1843. By W. S. B. WOOLHOUSE, F.R.A.S 10					
78.	Note on Question 1843. By SAMUEL ROBERTS, M.A 20					
79.	Elementary Method of finding the Centre of Gravity of a Circular Arc. By M. W. CROPTON, F.R.S					
80.	Investigation of the Equation of Motion of a Particle under a Central Force. By C. R. REPPIN, M.A.					
81.	Note on Euclid's 12th Axiom. By W. HANNA 2					
82.	Note on Question 3039. By the Rov. W. A. WHITWORTH, M.A 59					
83.	Note on Logarithmic Series. By ARTEMAS MARTIN 6					
84.	Indeterminates as a means of determining Possibility.					
	By G. O. Hanlon					
85,	Note on Question 2823. By Mongan Jankins, M.A 80					
	Solved Questions.

184	<ol> <li>Three points being taken at random within a circle, find the chance that the circle drawn through them will lie wholly within the given circle.</li> <li>17, 9:</li> </ol>					
253	4. It is a well known property in Geometry of Two Dimensions, that, when a system of conies have double contact, a variable chord of any one of them out in a constant anharmonic ratio by any other of them, (a) is cut in constant anharmonic ratios by them all, (b) touches the same one of them in every position, and (c) determines on every one of them two homographic systems of points, of which the two common points and lines of contact are double points and lines.  Show, analogously in Geometry of Three Dimensions, that when a system of quadrics have quadruple contact, (that is, when they pass through the four sides of a common quadrilatoral, real or imaginary in space,) a variable chord of any one of them cut in constant anharmonic ratios by any two of them. (c) is cut in constant anharmonic ratios by them all.					

44.	G G	4000			
No.	(b) touches the same two of them in every position, and (c) determines on every one of them two homographic systems of points, of which the four common points and planes of contact are double points and planes.	Page 54			
2670.	Find the number of ways in which the first 9 digits may be arranged so as to make up 99.				
2700.	Three equal coins at piled at random on a horizontal plane; required the probability that the pile will stand				
2709.	. A series of curves being determined by the elimination of $\theta$ between				
X	$=e^{m\theta}(m^2\cos 2\theta + 2m\sin 2\theta + m^2 + 4), Y = e^{m\theta}(m^2\sin 2\theta - 2m\cos 2\theta),$				
	where $X = \frac{2x}{c} m(m^2 + 4) + 2(m^2 + 2),$				
	and $Y = \frac{2y}{a} m (m^2 + 4) - 2m$ ;				
	show that when m = 0 the particular curve will be a cycloid	64			
2711.	To resolve any given number into three rational cubes	63			
2822.	A raffling match is composed of 5 persons, each throwing 3 times with 7 pennies, the one turning up the greatest number of heads to be winner. The third player having turned up 15 heads, it is required to determine his chance of winning				
2836.	Two conics osculate at O and intersect at P; if any straight line be drawn through P, the locus of the intersection of tangents, drawn to the conics at the points where this line meets them, is a conic touching the former at O, and also touching them again, and the curvature at O of this locus is three-fourths of the curvature of either of the given conics.				
2837.	If the numbers $a$ , $\delta$ , $a$ be the sides of a triangle, prove that $\frac{a}{b}(a+b+c)(a^2+b^2+c^2) > a^2+b^2+c^2+2abc$				
2845.	Find a complete solution of the equation in second differences				
	$u_x = u_{x-1} + (x-1)(x-2) u_{x-2}$	50			
2847.	Prove that $s^{iD^a}$ , $s^{-ka^a} = (1+4hk)^{-1}s^{-\frac{ka^a}{1+4hk}}$ , where $D = \frac{d}{dx}$ .	51			
2851.	From a given point a straight line is drawn to meet the tangent to a given conic, so that the two straight lines may be conjugate with respect to a second given conic. The locus of the point of intersection is a quartic curve, whose equation may be expressed in the form $U^9 + V^2 + W^2 = 0$ , where U, V, W are certain conics.	68			
2854.	Solve the equation $x^a = a$ , and find the value of $x$ when $a = 300$ .	40			
2856.	so as to intercept on a given circle PP'Q' an arc PP', whose middle A is a given point, meet the circle again in Q and Q';	40			
	prove that the line QQ' turns round a pole	48
