**ORIGIN OF
GOVERNMENT**

CONTENTS

CHAPTER I

THE NON-SURVIVAL OF THE FITTEST

	PAGES
Early theories of origin of government are political dissertations rather than scientific treatises. All speculation on politics must start again with the Darwinian theory. Yet interest in origin of government has been lessened by theories of evolution. Survival of fittest supposed to dispense with aid of government. Optimism of Spencer encourages belief in survival of the fittest. Examination of the phrase: capable of three different meanings, but originally formulated to apply to animal, not social conditions. According to its first meaning it is merely tautologous. In its second and only accurate meaning it merely implies adaptation to conditions. Its third meaning involves a deliberate fallacy: the fittest in a brigand's den is the fittest in the philosopher's study. Illustration of the three different ways in which the term "survival of fittest" is used. Analogous use of the term "nature" in philosophy. Nietzsche the only philosopher who reasons correctly from Darwinian premises; but he makes the mistake of applying the Darwinian law to social existence. Darwin's caution suggests his consciousness of a missing factor. This missing factor entirely changes the conditions so that survival of socially fittest is possible: just as a change of climate renders possible the existence of higher animal types. Morality is a plant which requires artificial protection: that protection can only be supplied by government	1-39

CHAPTER II

ORIGIN OF GOVERNMENT

Origin of government to be found in the struggle for supremacy. Animals not entirely occupied with struggle for existence. Leadership of a herd involves a psychological principle. Tendency to physical violence the most characteristic principle of animal existence. *A priori* necessity of some principle arising amidst savagery capable of repressing savagery. Utilitarian or humanitarian considerations being impossible, self-assertion by the strongest the only alternative. The war of organisms is now a scientific certainty. It is immaterial to the argument whether the unit of ancient society is the family or the individual. Patriarchal theory out of date. Origin of government cannot be separated from origin of nation, which is war. Views upon origin of government prejudiced by biological theories of society. Spencer's biological views. Mr. D. E. Fraser and the priestly origin of government. Universal applicability to the whole history of the human race must characterize a true theory of the origin of government. Patriarchal and priestly theories deficient in this respect, and in applicability to war. When Spencer is most reasonable he asserts that there has been no civilization without government, and that the origin of government is to be found in war. We have seen how government originates; the next question is, Why does it originate? Government is a device of nature for the protection of the social organism in the struggle for existence in which it has become involved. It assists the social organism in two most important points by counteracting individualism, and thus giving it cohesion and leadership. Though the first function of government is the protection of the social organism, it is none the less, but rather all the more, the protector of nascent morality. The view that the original function of government is to care for the State need not exclude the belief that its final function is to care for the individual. Not merely the dim begin-

nings of society, but the entire course of political history may be called in evidence of the correctness of the present theory - - - - -	40-90

CHAPTER III

THE REORIGINATION OF GOVERNMENT

Importance of the phenomenon of the reorigination of government. It is a natural antidote to the danger which threatens the social organism from anarchy. Case of the Greek despots. Political evolution takes place by violent as well as by peaceful methods. Usurpation not an interruption but a continuation of political development. Struggle for supremacy in the Wars of the Roses. The constitutional historians and their place in political science. Parliament in early times always ready to recognize successful usurpers. Early government, though brutal and irresponsible as the present theory would lead us to expect, is gradually adapted to the needs of the community by the pressure of the will of the people. Attitude of absolute monarchs evolutionally justified. Sanction of a political control must be kept distinct from its origin. To admit the value of usurpation is not to undermine the source of law and order. Study of history distorted by prejudices. Typical case of the historian Grote. Another method of evading plain issues is adopted with regard to such usurpers as William the Conqueror. Non-moral motives may be productive of highly moral results. The phenomenon of the reorigination of government may be regarded as evidence of nature's care for the social organism and possibly for humanity. The defiance of "nature's" pre-human dispositions takes place by order of nature - - - - -

ment consists. Historians and even statesmen on this subject are merely vague and romantic. If we were to believe them, we should conclude that the progress of civilization depended upon the destruction of government. Origin of anarchists to be traced to the craze for liberty. Confusion and contradictions inherent in the term "liberty." The cry for liberty is an echo from our evolutionary past. Two laws of evolution, one of which secures control, while the other prevents it from becoming too autocratic. "Tyranny" has an educational value; "liberty" is the cry of revolt, but also a wholesome corrective. The inductive study of the results of a successful agitation for liberty proves that it is merely an antidote to absolute monarchy. The cry for liberty does not secure liberty, but merely improved government. "Liberty" is a mere formula to express the right of the people to be governed in their own interests and to enjoy the results of their own energies. There is no real liberty except what is left after provision has been made for the just and necessary claims of the State. But since the individual exists only through the State, and the State is under the obligation of providing for self-defence, therefore the just claims of the State include whatever measures are necessary for the defence of the social organism. Accordingly, if to realize liberty merely means to introduce better government, the present theory cannot be condemned on the ground that the strong ruler lessens liberty, but only on the ground that he produces worse government—an assertion which these pages show to be untrue 127-164

CHAPTER V

REORIGINATION OF GOVERNMENT IN THE ROMAN REPUBLIC AND EMPIRE

Advantage of the change from Roman Republic to Roman Empire. Empire the result of the greatest struggle for supremacy known in history, but at the same time a great recuperative political process ending in the control of a

Contents

	PAGES
single ruler. First care of Augustus to secure stability of government by discouraging conspicuous greatness. Explanation of the necessity of such a course: attempt to counteract the causes which led to the fall of the Republic. Fixity of supreme control a necessity of human progress; and must be restored even at severe cost. Gibbon's view of usurpation as illustrated by action of Prætorian Guards. Two kinds of usurpation—one by men who are great, and one by men who have greatness dishonestly thrust upon them. Action of Prætorians a species of debased democratic election. Comparison between real Emperors and puppet Emperors. From Vespasian to Julian the only salvation is found in strong usurpers. Nature's occasional failure to establish government by struggle for supremacy. Frankish, Visigothic, and Lombard Kings. Merovingians. Carolingians. Principle of election. Meaning of the struggle for supremacy in the "Dark Ages." "Nature uses evil as the raw material of good." Italian republics of the Middle Ages. Unsound brilliance due to premature republicanism which cultivates the intellect at the expense of the moral faculties. History of Milan, of Naples, of Florence, all illustrate the suspension of republican institutions by the decree of nature when disorder is threatened. The present chapter supplies inductive proof of the existence of a law of "government by natural selection"	165-220

CHAPTER VI

FIXED GOVERNMENT

Fixed government a necessity of progress. When fixed government is secured, the struggle for supremacy becomes the struggle for distinction. Under constitutional monarchy, though the King is no longer "naturally selected," the Minister is. Absolute monarchy a necessary but dangerous instrument of political discipline. Its worst features, however, are merely the excessive prolongation of a necessary phase of political evolution. On the hypothesis that absolute monarchy and govern-
