P R E F A C E.

THE following pages are designed solely as an accompaniment to Fitz's Globe. They therefore contain only the text which is thought to bear expressly upon the use of this globe. A brief Appendix, comprising an historical account of globes, with a few details respecting their construction, forms the single exception. I am happy to render acknowledgments to Prof. G. A. HILL of Harvard College, from whom I have received valuable aid in the preparation of the book.

As regards the practical teaching of the subject, it is suggested that it would be well to have the learner first study thoroughly the first 71 articles of Part I.; then take the Description of the Globe (in connection, of course, with the Globe itself); and then proceed to the Problems, going back to the remaining articles of Part I. when he comes to the Problems which refer to the subjects explained in those articles.

It is intended in a future edition to enlarge this manual, giving it more the form of an Astronomy, and having a portion of it adapted to the use of a celestial globe.

E. E. F. -

WATERTOWN, January, 1876.

CONTENTS.

PART I.

	Page.
SECTION I. GEOMETRICAL DEFINITIONS	7
SECTION II. GEOGRAPHICAL DEFINITIONS	12
SECTION III. ASTRONOMICAL DEFINITIONS	15
SECTION IV. PHENOMENA CAUSED BY THE MOTIONS OF THE EARTH	20
THE DIURNAL COURSE OF THE SUN	37
MEASUREMENT OF TIME	42
THE SEASONS	45
TWILIGHT	50
DESCRIPTION OF THE GLOBE	55

PART II.

PROBLEMS.

I. To find the Latitude and Longitude of a given Place	59
II. Given the Latitude and Longitude, to find the Place	60
III. To find all those Places that are in the same Latitude or Longitude with a given Place	60
IV. Given two Places, to find their Difference of Latitude	61
V. Given two Places, to find their Difference of Longitude,	61
VI. To find the Antæci, Periæci, and Antipodes of a given Place	62
VII. To find the Distance between two Places	63
VIII. Given the Latitude or Longitude of a Place, and its Dis- tance from a given Place, to find the Place whose Latitude or Longitude is given	64
IX. To find the Length of a Degree of Longitude corre- sponding to a given Latitude	65

X.	To bring a given Place into a given Hour of the Day or Night	66
XI.	Given the Difference of Longitude between two Places, to find their Difference of Time	67
XII.	Given the Difference of Time between two Places, to find their Difference of Longitude	68
XIII.	Given two Places, to find their Difference of Time	69
XIV.	Given the Hour of the Day at a Place, to find all those Places on the Earth's Surface where it is then Noon, or any other given Hour	70
XV.	Given the Hour of the Day at a Place, to find the Hour at another Place	72
XVI.	To represent the Three Positions of the Sphere, — Right, Parallel, and Oblique	73
XVII.	To find the Times of Sunrise and Sunset at a given Place on a given Day, and also the Lengths of the Day and of the Night	74
XVIII.	To find the Length of a Period of Continuous Day upon a given Parallel in the North Frigid Zone; also when this Period begins and ends	76
XIX.	To find the Length of a period of Continuous Night upon a given Parallel in the North Frigid Zone; also when this Period begins and ends	77
XX.	To find the Length of a Period of Alternate Day and Night, succeeding one of Continuous Day, upon a given Parallel in the North Frigid Zone; also when this Period begins and ends	77
XXI.	To find the Length of a Period of Alternate Day and Night, succeeding one of Continuous Night, upon a given Parallel in the North Frigid Zone; also when this Period begins and ends	78
XXII.	At a given Place, the Day being given, to find what other Day of the Year is of the same Length	80
XXIII.	To find at what Latitude, not within the Polar Circles, a given Day is of a given Length	80
XXIV.	At a given Place, the Day and Hour being given, to find how the various Regions of the Earth are situated with regard to Day, Night, Twilight, &c.	82
XXV.	To pass the Globe through the four Seasons of Spring, Summer, Autumn, and Winter; also to show how the Northern and the Southern Hemispheres are illuminated upon a given Day, and the Sun's Place in the Ecliptic.	83

XXVI.	To show the Rate at which the Sun moves between the Tropics, — a Rate bearing a close relation to the Rate at which Day or Night changes in Length, or the Rate at which the Sun's Diurnal Arcs increase or decrease in Extent	85
XXVII.	The Day being given, to find the Sun's Longitude, Right Ascension, and Declination	85
XXVIII.	The Day being given, to find those Places where the Sun is Vertical, or in the Zenith, at Noon	86
XXIX.	The Day, Hour, and Place being given, to find where the Sun is Vertical	86
XXX.	To find those two Days of the Year on which the Sun will be Vertical at a given Place in the Torrid Zone	87
XXXI.	The Length of the Day at any Place being given, to find the Sun's Declination, and the two Days of the Year on which it has this Declination	87
XXXII.	A Place and the Day of the Year being given, to find how much the Sun's Declination must vary to make the Day a given Time longer or shorter than the given Day; also how many Days will elapse during the change	89
XXXIII.	To find in what Latitude the Sun does not set during a given Number of Days in the Frigid Zone	92
XXXIV.	Given a Day, to find the Equation of Time, or the Difference between Sun-Time and Clock-Time	92
XXXV.	To Describe the Course of the Sun, with respect to the Horizon and visible Heavens, at a given Place upon a given Day	93
XXXVI.	To find the Sun's Altitude and Azimuth at a given Place, the Day and Hour being known	95
XXXVII.	To find the Region of the Earth in which a Solar Eclipse is visible, the Time of its Occurrence at Washington being given	96
XXXVIII.	To find the Region of the Earth in which a Lunar Eclipse is visible, the Time of its Occurrence at Washington being given	96
XXXIX.	A Place and Day of the Year being given, to find the Length of Morning and Evening Twilight	97
XL.	A Place and Day of the Year being given, to find when Morning Twilight begins, and Evening Twilight ends	98
