PREFACE.

In presenting this bibliography of the Manual Arts the author realizes fully that a partial or even a complete list of titles in any subject or branch of school work has little intrinsic value. It is only when a bibliography becomes a reference book for work in the subject treated that it best serves its purpose.

The idea has been widely held by some even in manual training work, that there is scant material published on the subject. For the past five years, during which time the preparation of these pages has been going forward, the writer has been convinced to the contrary. Few teachers know exactly what has appeared in print bearing upon hand work, hence there arises a demand for a bibliography of the subject. It is then partly with the view of meeting this demand that this book is published.

Much that has been written is, of course, of questionable value. Many of the earlier texts have served their purpose well, newer thought and methods coming in to meet more exactly the needs and conditions of the time. In many respects a short select list of titles would prove as valuable to the teacher of the Manual Arts as will the present volume. This more complete list, however, will meet the needs of the educator and investigator, and preserve in permanent form the record of that branch of education which has risen into prominence more rapidly, perhaps, than has any other.

As this bibliography is intended for the use of the instructor in hand work not only, but for the grade teacher as well, it has been thought wise to classify the titles under several heads. The arrangement of authors in alphabetical order seemed the only practical method. At the suggestion of prominent teachers of domestic science it was thought best to give a special chapter to the general topic, "Home Science," no attempt having heretofore been made to list such titles as are here given. Books or articles dealing with both theoretical and practical phases of the problem have been placed in one or another of the lists as thought best.

Many of the books or articles mentioned are out of print.

These can only be had in private or public libraries. Some of these treatises and reports are, indeed, of the very best.

One of the chief values claimed for the bibliography lies in the comments following certain of the titles, thus rendering the selection of a book less a matter of "guess work" than would otherwise be the case.

No doubt the compiler of the volume will receive some criticism for the manner in which he has referred to certain of the titles listed. No comment, however, has in the case of an American publication been made on hear-say evidence. Some note or word of comment has been given where, in the writer's judgment, it was most deserved. Those books best treating any given topic have been given special mention. There are, perhaps, some equally meritorious works upon which no comment is made. In such cases the writer has had no opportunity of examining the books in question.

While no complete bibliography of the Manual Arts has before been published, the author desires to give credit to several sources for valuable assistance rendered. The following have been freely consulted: "A Bibliography of Manual Training," prepared by the Eastern Manual Training Association; "Bulletin No. 9 of the High School Department of the University of the State of New York, Manual Training Syllabus;" "Manual Training Made Serviceable to the School," Dr. Woldemar Götze; "Contributions to the Bibliography of Manual Training and Industrial Education," by Mary Danna Hicks, in the Report on Manual Training and Industrial Education, Boston, 1893; "Eighth Annual Report of the Commissioner of Labor," Washington, D. C., 1892; "Bibliography of Child Study," Report of the Commissioner of Education, 1897-98.

Thanks are due Mrs. Grace E. Dutton, Director of the Department of Domestic Economy of Throop Polytechnic Institute, for suggestions on the chapter on Home Science; to Mr. Paul Boehncke, Instructor in Modern Languages, for assistance on titles published in foreign languages, to Mr. Ralph Cross, of the Commercial Department of the school, who has assisted in the mechanical details and to many American and European teachers for aid and advice.

A. H. C.
