## PREFACE

In preparing this work, the material has been gathered from all available sources and the author has had in mind the desirability of having the subject so presented that the book can be readily used as a reference work. The first part consists of the symptoms pertaining to the ear, arranged under the different remedies, followed by the general indications of the drug, with aggravations and ameliorations.

The second part is a repertorial cross index, which I consider the most valuable feature of the book, enabling one to more readily find the symptoms sought for. It is a repertory of the symptoms contained in this book only. I realize that the work is but a commencement in the right direction, to be enlarged upon later, either by myself or those that follow.
