FRANCIS A. RANKEN, M.A. C.E.

LECTURER AT THE HARTLEY INSTITUTION, SOUTHAMPTON;
FORMERLY ASSISTANT ENGINEER ON THE CAMBRIAN RAILWAYS, AND
SCHOLAR OF GONVILLE AND CAIUS COLLEGE, CAMBRIDGE.

D. APPLETON AND CO.

NEW YORK.

1872.

P R E F A C E .

IN THE FOLLOWING PAGES I have endeavoured to set in a clear light the theory and method of computing by diagrams the Strains in Trusses bearing a constant load, without taking into consideration the subject of transverse strain. While treating only Balancing Systems of forces in one plane, each system acting on a point, I have purposely avoided introducing the Principle of Moments, wishing to confine myself to the results to be deduced from the Parallelogram of Forces. I have tried to avoid everything that might give the appearance of difficulty, and I hope that what I have written may be found intelligible even by those who have no previous knowledge of Statics. In doing so I have made use of the assistance of others when necessary, and I have to thank Professor FULLER, of University College, for several suggestions.

CONTENTS.

	PAGE
I. INTRODUCTION	1
II. BALANCING SYSTEMS OF THREE FORCES	8
III. ROOF TRUSSES	13
IV. BALANCING SYSTEMS OF MORE THAN THREE FORCES	28
V. ROOF TRUSSES (<i>continued</i>)	33
VI. GIRDERS, OR BRIDGE TRUSSES	52
VII. APPENDIX	60
