PREFACE.

THE subject selected by the Examiners for the Adams Prize for 1882 was

“A general investigation of the action upon each other of two closed vortices in a perfect incompressible fluid.”

In this essay, in addition to the set subject, I have discussed some points which are intimately connected with it, and I have endeavoured to apply some of the results to the vortex atom theory of matter.

I have made some alterations in the notation and arrangement since the essay was sent in to the Examiners, in so doing I have received great assistance from Prof. G. H. Darwin, F.R.S. one of the Examiners, who very kindly lent me the notes he had made on the essay. Beyond these I have not made any alterations in the first three parts of the essay: but to the fourth part, which treats of a vortex atom theory of chemical action, I have made some additions in the hope of making the theory more complete: paragraph 60 and parts of paragraphs 58 and 59 have been added since the essay was sent in to the Examiners.

I am very much indebted to Prof. Larmor of Queen's College, Galway, for a careful revision of the proofs and for many valuable suggestions.

J. J. THOMSON.

TRINITY COLLEGE, CAMBRIDGE.

October 1st, 1883.

CONTENTS.

	PAGE
INTRODUCTION	ix
PART I.	
PARAGRAPH	
§ 4. Momentum of a system of circular vortex rings	8
§ 5. Moment of momentum of the system	6
§ 6. Kinetic energy of the system	8
§ 7. Expression for the kinetic energy of a number of circular vortex rings moving inside a closed vessel	11
§ 8. Theory of the single vortex ring	13
§ 9. Expression for the velocity parallel to the axis of x due to an approximately circular vortex ring	15
§ 10. The velocity parallel to the axis of y	18
§ 11. The velocity parallel to the axis of z	20
§ 12. Calculation of the coefficients in the expansion of	
$\frac{1}{(1 + a^2 - 2a \cos \theta)^{\frac{3}{2}}}$	
in the form $A_0 + A_1 \cos \theta + A_2 \cos 2\theta + \dots$	22
§ 13. Calculation of the periods of vibration of the approximately circular vortex ring	29
PART II.	
§ 14. The action of two vortex rings on each other	87
§ 15. The expression for the velocity parallel to the axis of x due to one vortex at a point on the core of the other	89
§ 16. The velocity parallel to the axis of y	40
§ 17. The velocity parallel to the axis of z	40
§ 20. The velocity parallel to the axis of x expressed as a function of the time	41
§ 21. The similar expression for the velocity parallel to the axis of y	43
§ 22. The similar expression for the velocity parallel to the axis of z	44
§ 23. }	
§ 24. } The expression for the deflection of one of the vortex rings	46
§ 25. }	
§ 26. The change in the radius of the vortex ring	50
§ 27. The changes in the components of the momentum	52
§ 28. }	
§ 29. } Effects of the collision on the sizes and directions of motion of the	
§ 30. } two vortices.	54
§ 31. }	

PARAGRAPH		PAGE
§ 32.	The impulses which would produce the same effect as the collision	56
§ 33.	The effect of the collision upon the shape of the vortex ring: calcu-	
§ 34.)	lation of $\int_{-\infty}^{+\infty} \frac{\cos nt \cdot dt}{(c^2 + k^2 t^2)^{\frac{1}{2}(n+1)}}$	56
§ 35.	Summary of the effects of the collision on the vortex rings	62
§ 36.	Motion of a circular vortex ring in a fluid throughout which the dis-	
	tribution of velocity is known	63
§ 37.)	Motion of a circular vortex ring past a fixed sphere	67
§ 38.)		

PART III.

§ 39.	The velocity potential due to and the vibrations of an approximately circular vortex column	71
§ 40.	Velocity potential due to two vortex columns	74
§ 41.	Trigonometrical Lemma	75
§ 42.	Action of two vortex columns upon each other	75
§ 42*.	The motion of two linked vortices of equal strength	78
§ 43.	The motion of two linked vortices of unequal strength	86
§ 44.	Calculation of the motion of two linked vortices of equal strength to a higher order of approximation	88
§ 45.	Proof that the above solution is the only one for circular vortices	92
§ 46.	Momentum and moment of momentum of the vortex ring	92
§ 47.	The motion of several vortex rings linked together	93
§ 48.	The equations giving the motion when a system of n vortex columns of equal strength is slightly displaced from its position of steady motion	94
§ 49.	The case when $n=3$	98
§ 50.	The case when $n=4$	99
§ 51.	The case when $n=5$	100
§ 52.	The case when $n=6$	103
§ 53.	The case when $n=7$	105
§ 54.	Mayer's experiments with floating magnets	107
§ 55.	Summary of this Part	107

PART IV.

§ 56.	Pressure of a gas. Boyle's law	109
§ 57.	Thermal effusion	112
§ 58.	Sketch of a chemical theory	114
§ 59.	Theory of quantivalence	118
§ 60.	Valency of the various elements	121
