HARPER & BROTHERS, PUBLISHERS NEW YORK AND LONDON MCMXXII

TABLE OF CONTENTS

CHAPTER Des		PAGES
1.	TERMS, RELATIONS, PROPOSITIONS Introduction to inference Preliminary definition of the science. Logic and the sciences. Inference and its signs. The case of false premises. Notation for classes. Truth-values inde- pendent of the terms. The properties of a relation- ship. Meaning of definition. Exercises.	1-17
п.	Classification of terms The predicables. Reduction of terms to the concrete general. Universe of discourse. Exercises.	18-26
111.	Logical and grammatical forms Propositions recognized by grammarian. Forms rec- ognized by the logician. The double meaning of dis- junction. Law connecting conjunction and disjunction. Law connecting disjunction and implication. The categorical forms and their diagrammatical repre- sentation. Exercises.	27-89
	FALLACIES	
IV.	Historical changes in meaning The problem of semasiology. Law of generalization. Law of specialization. Transfer of meaning by anal- ogy. Exercises.	43-51
v.	Semi-logical and material failacies Sophism, paradox and paralogism. Extension of the meaning of terms or relationships. Equivocation and amphibology. Fallacy of accent. Failacy of many questions. Failacy of accident. Conscious ambi- guities. Ignoratio elenchi. Ambiguities of common words. Petitio principii. Achilles and the tortoise, Exercises.	52-74
	IMMEDIATE INFERENCE	1022024
VI.	The universe of the categorical forms Meaning of the true and untrue. The propositional universe. Contradictorles, contraries, subcontraries and subalterns. Exercises.	77-84

CONTENTS

CHAPTER

VII. The moods of immediate inference...... Figures of immediate inference. Array of immediate inference. Validity and invalidity of Euler's diagrams. Deduction of the valid moods. Deduction of the invalid moods. Exercises.

SYLLOGISM

- IX. The moods and figures of the syllogism...... 107-124 Illustrative examples. Rules for constructing the diagrams. Invalidity determined by diagram. Determination of figure. Other diagrammatic methods. Parts of the syllogism. Array of the syllogism. The mnemonic lines. Reductio ad impossibile. Indirect reduction by other processes. Exercises.

- - vi

PREFACE

The recent developments in logical theory following upon the contributions of Boole, Pierce, and Schröder have seemed to place the subject beyond the reach of the average student and even in most instances beyond the reach of the technically equipped philosopher. The result has been to reduce the attention that was formerly given to elementary instruction in logic and to displace the traditional course from its originally dominant position in the university curriculum. The conviction is abroad that the ancient organon is so far inferior to the modern instrument perfected by the critical labors of Peano, Frege, Russell, and others, that it no longer deserves the attention once bestowed upon it. These objections the writer has endcavored to meet, in the first instance by introducing no symbols whatever, save the ones employed by traditional logic itself, so that the treatment may be followed by any intelligent reader, and secondly by keeping modern developments always in mind while following the traditional order of treatment. Finally, he has met the recent contention that the classical system does not hold true in all of its parts, by showing in the last chapter of this work that

A FIRST BOOK IN LOGIC

this view is based upon a misapprehension. In completing the chapters dealing with the theoretical portion of the subject the writer has availed himself of parts of his *Letters on Logic*, which in turn is based upon a brief syllabus which Professor Singer once placed at his disposal, and also of parts of his recently published *Foundations of Formal Logic*.
