SOLID GEOMETRY

AND

CONIC SECTIONS.

“Ὡς οὖν τ' ἄρα, ἦν δ' ἐγώ, μάλιστα προστακτέον, ὅπως οἱ ἐν τῇ καλλί-
πῳδῳι σοι μηδενὶ τρόπῳ γεωμετρίας ἀφέξονται· πρὸς γὰρ πάσας μαθήσεις,
ᾧστε κάλλιον ἀποδέχσθαι, ἴσμεν πῶς ὅτι τῷ ὄλῳ καὶ παντὶ διοίσει ἡμέτερος
τε γεωμετρίας καὶ μή. τῷ παντὶ μέντοι νῆ Δί', εἴφη.”

PLATO, *Republic*. Bk. vii. 527.

This was Divine Plato his Judgement, both of the purposed, chief, and perfect use of Geometrie; and of his second, depending and derivative commodities. And for us, Christen men, a thousand thousand occasions are to have neede of the helpe of Metaphysicall Contemplations; whereby to trayne our Imaginations and Fancies, by little and little, to forsake and abandon the grosse and corruptible Objectes of our outward senses: and to apprehend, by sure Doctrine demonstrative, Things Mathematicall.

John Dee his Mathematicall Preface to Euclides Elementes.

A. D. 1570.

PREFACE.

THIS work is an endeavour to introduce into schools some portions of Solid Geometry which are now very little read in England. The first twenty-one Propositions of Euclid's Eleventh Book are usually all the Solid Geometry that a boy reads till he meets with the subject again in the course of his analytical studies. And this is a matter of regret, because this part of Geometry is specially valuable and attractive. In it the attention of the student is strongly called to the subject matter of the reasoning; the geometrical imagination is exercised; the methods employed in it are more ingenious than those in Plane Geometry, and have greater difficulties to meet; and the applications of it in practice are more varied.

I have added short Appendices on Transversals, and on Harmonic Division, which will, I hope, be found useful.

In the chapters on Conic Sections I have endeavoured to shorten the subject, which, as presented in the most extensively used text-books, those of Drew, Taylor, and Besant, has somewhat outgrown the capabilities of school-boys. This is accomplished partly by defining these curves as sections of a cone, and deducing immediately their fundamental properties; and partly also by taking

the ellipse and hyperbola together in proving many of their common properties. I have tried in all cases to give the most natural proof, and to arrange the Theorems in an easily remembered order, and have used Corollaries freely. I have also left out the subject of Curvature, which may be read by the student along with Newton with greater advantage than at this early stage of his studies.

RUGBY, *January*, 1872.

PREFACE TO THE SECOND EDITION.

IN this edition there has been some change in Section I, and Section IV. has been largely added to. There have been also some slight changes in the chapters on the ellipse and hyperbola.

I have much pleasure in acknowledging my obligations to Mr R. Tucker for corrections and criticism.

RUGBY, *January*, 1873.

PREFACE TO THE THIRD EDITION.

IN this edition I have added an important theorem on the parabola, and a few exercises, but have made no other change.

RUGBY, *Feb*, 1876.

TABLE OF CONTENTS.

GEOMETRY OF SPACE.

SECTION I.

| | PAGE |
|---------------------|------|
| Planes | 1 |
| EXERCISES | 22 |

SECTION II.

| | |
|---------------------|----|
| Polyhedra | 23 |
| EXERCISES | 30 |

SECTION III.

| | |
|-----------------------|----|
| Stereometry | 31 |
| EXERCISES | 51 |

SECTION IV.

| | |
|-----------------------------------|----|
| The Sphere | 52 |
| EXERCISES | 66 |
| MISCELLANEOUS EXERCISES | 68 |

APPENDIX I.

| | |
|---|----|
| Transversals. Positive and Negative Signs in Geometry | 72 |
| EXERCISES | 79 |

APPENDIX II.

| | |
|-----------------------------|----|
| Harmonic Division | 81 |
| EXERCISES | 91 |
