## PREFACE.

---

Much of the present volume is, in a measure, the outcome of a thorough revision, remodelling and simplification of the various articles contributed by the author to Pepper's System of Medicine, Buck's Reference Handbook of the Medical Sciences, and Keating's Cyclopædia of the Diseases of Children. Moreover, in the endeavor to present the subject as tersely and briefly as compatible with clear understanding, the several standard treatises on diseases of the skin by Tilbury Fox, Duhring, Hyde, Robinson, Anderson, and Crocker, have been freely consulted. The space allotted to each disease has been based upon relative importance. As to treatment, the best and approved methods only, those which are founded upon the aggregate experience of dermatologists, are referred to.

For the benefit of those whose clinical opportunities are somewhat limited, an appendix containing references to colored plates of the several American Atlases of Skin Diseases, by Duhring, G. H. Fox, Taylor, and Morrow is added. For general information a statistical table from the Transactions of the American Dermatological Association is also appended.

H. W. S.
