PREFACE TO AMERICAN EDITION

ANGINA PECTORIS, on account of its high mortality and sudden onset, and because, too, it has afflicted so many distinguished men, among whom may be mentioned Seneca, John Hunter, Arnold of Rugby, has always aroused the intense interest of clinicians.

Professor V. Neusser in the present volume has presented very lucidly and succinctly his view-point, supported by a great personal experience and vast clinical material.

His conclusions should receive the careful consideration of thoughtful practitioners, and are of great value as throwing some light on a disease still the subject of speculation.

No attempt has been made to add to the original as the subject matter is so personal that additions would have marred the harmony of this medical classic.

ANDREW MACFARLANE.
