PREFACE

THIS small volume is the fulfilment of a wish often expressed by the students of the Indiana Veterinary College. It comprises, with the exception of dissections and clinical demonstrations, the work with the senior class in this department during the term.

As external diseases of the eye are principally seen in animals, more attention has been given such diseases in as plain and few words as is consistent with the subject, so that they may be comprehended by the student as well as by the practitioner.

I am indebted to Drs. G. H. Robberts, W. B. Craig, and other members of the Indiana Veterinary College for valuable assistance, and to Drs. G. E. deSchweinitz, Alexander Duane, Wm. C. Posey, and other authors of works on ophthalmology for valuable information.

As the literature upon diseases of the eye in animals is extremely limited, I have been obliged to draw largely from "Law's Veterinary Medicine," especially on the subject of parasites of the eye.

WALTER N. SHARP.
