the 1990s, the number of people with diabetes has increased in all industrialized countries.

Diabetes is a chronic disease with a high prevalence. In the Netherlands, the prevalence of diabetes is 6.5% (1). The prevalence of diabetes is expected to increase in the next decades, because of the increase in the number of people with diabetes and the increase in the life expectancy of people with diabetes. The prevalence of diabetes is expected to increase from 6.5% in 1990 to 10.5% in 2020 (2).
