THE ARM OF A SAMPLE STUDENT OF "JIU-JITSU."

The Japanese do not care for great lumps of muscle on the upper arms. The little lump just over the bend of the elbow is regarded by the Japanese as being the most important of all. A splendid type of the arm produced by *jiu-jitsu*. The man stands 5 feet 1 inch, weighs 120 pounds.

PREFACE

IN presenting this volume to the public the author is aware that he is offering a decided novelty to readers who are familiar only with American systems of athletics. The Japanese system of physical training is so ancient that its origin dates before the time when the authentic history of these people began. Yet, while the Japanese have adapted from Western civilisation everything that they consider to be necessary to their national development, they have retained *jiu-jitsu* and all its underlying principles as the means by which the nation is to work for its physical well-being. They have done more, for, whereas *jiu-jitsu* was taught at one time to the aristocratic classes only, it is taught now to all of the people of *Dai Nippon* who wish to acquire it. The value of *jiu-jitsu* is proven by the fact that the Japanese, while a diminutive race, possess the greatest endurance of any people on earth.

It may seem strange that the presentation of this science—for such it may be aptly termed—should come through an American. But the author has approached his task with no hesitancy. Something more than seven years ago he began his course of instruction in *jiu-jitsu* under Japanese friends in this country. Subsequently he studied in Nagasaki, under Inouye San, instructor of *jiu-jitsu* in the police department of that city. Still later the author took supplementary courses under native teachers in Yokohama and in Tokio. When Inouye San visited this country the author went once more under the tuition of that veteran, who is considered to be one of the best instructors in Japan.

There are in Japan, to-day, some six different systems of *jiu-jitsu* taught. In the main, the author has described the science as it is imparted by Inouye San, but some of the best work from the other schools has been included. The aim has been to give a perfect, composite whole of the essential principles of health and of the tricks of attack and defence that are needed by the perfect physical man or woman.

The reader will find much of interest in a
