## PREFACE.

---

THIS book is issued as a supplement to my "Elementary Text Book of Heat and Light," and is not, therefore, intended to be complete in itself, but is practically an expansion of the chapters on Calculations in that book. In addition to this the scope has been extended so as to cover the ground defined by the syllabus of the Intermediate Science and Preliminary Scientific Examinations of the University of London.

Experience has shown that students generally find great difficulty in dealing with questions bearing on the quantitative relations of any branch of Physical Science. It is hoped that this book will be found useful by students meeting with difficulties of this nature in the study of Heat and Light.

I shall be glad to receive suggestions or corrections from any reader who may be kind enough to send them.

R. W. S.
