PREFACE.

Our intention in writing this book was not to give an account of physical laboratory methods in general, but to describe a limited number of carefully chosen exercises such as we have found in our experience to be suitable for the laboratory work of students who have had a fair course in General College Physics.

The descriptions of the exercises will usually fit apparatus and conditions of considerable diversity, but many practical details have been included where experience has shown that they are necessary. Other instructors who may adopt the book will probably find some of the exercises unsuited to their classes, but the list is sufficiently extensive to afford a considerable variety of selection.

The descriptions of apparatus are intended to be read by the student with the apparatus before him. Hence elaborate illustrations have been thought unnecessary. For an extended account of certain special topics, such as the theory of the balance and the construction of galvanometers, references to other works have been given.

Usually several text-books and special treatises have been referred to at the beginning of the account of an experiment. It is assumed that each student will have one of the text-books and that some of the special works will be found in the reference room of the laboratory. While the reference is generally to the latest edition (at the present date, 1910), those who have different editions will have no difficulty in finding the passages referred to. Each instructor who uses

the book will exercise his discretion as to what preliminary reading will be required and will issue the necessary instructions to his class.

We are indebted to Dr. Albert W. Hull for assistance in reading the page proof. Many of the tables have been taken from Ewell's Physical Chemistry.

CONTENTS.

	PAGE
GENERAL INTRODUCTION	1
1. Purpose of Course. 2. General Directions. 3. Reports. 4. Errors. 5. Errors of Observation. 6. Possible Error of a Calculated Result. 7. General Method for the Possible Error of a Result. 8. Some General Notes on Errors. 9. Probable Error of a Mean. 10. Limits to Calculations. 11. Notation of Large and Small quantities. 12. Plotting of Curves.	
MECHANICS	13
13. The Use of a Vernier. 14. Vernier Caliper. 15. Microm- eter Caliper. 16. Micrometer Microscope. 17. Com- parator. 18. Spherometer. 19. Dividing Engine. 20. Cathetometer. 21. Barometer. 22. The Balance. 23. Ad- justment of Telescope and Scale. 24. Time Determination.	
I. To Make and Calibrate a Scale.	
II. Errors of Weights.	
III. Volume, Mass, and Density of a Regular Solid.	
IV. Mohr-Westphal Specific Gravity Balance.	
V. Density by the Volumenometer.	
VI. Density of Gases.	
VII. Acceleration of Gravity by Pendulum.	
VIII. Coefficient of Friction.	
IX. Hooke's Law and Young's Modulus.	
X. Rigidity (or Shear Modulus).	
XI. Viscosity.	
XII. Surface Tension.	
HEAT	63
25. Radiation Correction in Calorimetry. 26. The Beck- mann Thermometer.	
XIII. Thermometer Testing.	
XIV. Temperature Coefficient of Expansion.
