THE STUDY OF ARCHITECTURE.

I SUPPOSE there is no man who, permitted to address, for the first time, the Institute of British Architects, would not feel himself abashed and restrained, doubtful of his claim to be heard by them, even if he attempted only to describe what had come under his personal observation, much more if on the occasion he thought it would be expected of him to touch upon any of the general principles of the art of architecture before its principal English masters.

But if any more than another should feel thus abashed, it is certainly one who has first to ask their pardon for the petulance of boyish expressions of partial thought; for ungraceful advocacy of principles which needed no support from him, and discourteous blame of work of which he had never felt the difficulty.

Yet, when I ask this pardon, gentlemen—and I do it sincerely and in shame—it is not as desiring to retract anything in the general tenor and scope of what I have hitherto tried

to say. Permit me the pain, and the apparent impertinence, of speaking for a moment of my own past work; for it is necessary that what I am about to submit to you to-night should be spoken in no disadvantageous connexion with that; and yet understood as spoken in no discordance of purpose with that. Indeed, there is much in old work of mine which I could wish to put out of mind. Reasonings, perhaps not in themselves false, but founded on insufficient data and imperfect experience—eager preferences, and dislikes, dependent on chance circumstances of association, and limitations of sphere of labour: but, while I would fain now, if I could, modify the applications, and chasten the extravagance of my writings, let me also say of them that they were the expression of a delight in the art of architecture which was too intense to be vitally deceived, and of an inquiry too honest and eager to be without some useful result; and I only wish I had now time, and strength, and power of mind, to carry on, more worthily, the main endeavour of my early work. That main endeavour has been throughout to set forth the life of the individual human spirit as modifying the application of the formal laws of architecture, no less than of all other arts; and to show that the power and advance of this art, even in conditions of formal nobleness, were dependent on its just association with sculpture as a means of expressing the beauty of natural forms: and I the more boldly ask your

permission to insist somewhat on this main meaning of my past work, because there are many buildings now rising in the streets of London, as in other cities of England, which appear to be designed in accordance with this principle, and which are, I believe, more offensive to all who thoughtfully concur with me in accepting the principle of Naturalism than they are to the classical architect to whose modes of design they are visibly antagonistic. These buildings, in which the mere cast of a flower, or the realization of a vulgar face, carved without pleasure by a workman who is only endeavouring to attract attention by novelty, and then fastened on, or appearing to be fastened, as chance may dictate, to an arch, or a pillar, or a wall, hold such relation to nobly naturalistic architecture as common sign-painter's furniture landscapes do to painting, or commonest wax-work to Greek sculpture; and the feelings with which true naturalists regard such buildings of this class are, as nearly as might be, what a painter would experience, if, having contended earnestly against conventional schools, and having asserted that the Greek vase-painting, and Egyptian wall-painting, and Medieval glass-painting, though beautiful, all, in their place and way, were yet subordinate arts, and culminated only in perfectly naturalistic work such as Raphael's in fresco, and Titian's on canvas;—if, I say, a painter, fixed in such faith in an entire, intellectual, and manly truth, and maintaining

that an Egyptian profile of a head, however decoratively applicable, was only noble for such human truth as it contained, and was imperfect and ignoble beside a work of Titian's, were shown, by his antagonist, the colored daguerreotype of a human body in its nakedness, and told that it was art such as that which he really advocated, and to such art that his principles, if carried out, would finally lead.

And because this question lies at the very root of the organization of the system of instruction for our youth, I venture boldly to express the surprise and regret with which I see our schools still agitated by assertions of the opposition of Naturalism to Invention, and to the higher conditions of art. Even in this very room I believe there has lately been question whether a sculptor should look at a real living creature of which he had to carve the image. I would answer in one sense,—no; that is to say, he ought to carve no living creature while he still needs to look at it. If we do not know what a human body is like, we certainly had better look, and look often, at it, before we carve it; but if we already know the human likeness so well that we can carve it by light of memory, we shall not need to ask whether we ought now to look at it or not; and what is true of man is true of all other creatures and organisms—of bird, and beast, and leaf. No assertion is more at variance with the laws of classical as well as of subsequent art than the com-

mon one that species should not be distinguished in great design. We might as well say that we ought to carve a man so as not to know him from an ape, as that we should carve a lily so as not to know it from a thistle. It is difficult for me to conceive how this can be asserted in the presence of any remains either of great Greek or Italian art. A Greek looked at a cockle-shell or a cuttle-fish as carefully as he looked at an Olympic conqueror. The eagle of Elis, the lion of Velia, the horse of Syracuse, the bull of Thurii, the dolphin of Tarentum, the crab of Agrigentum, and the crawfish of Catana, are studied as closely, every one of them, as the Juno of Argos, or Apollo of Clazomenae. Idealism, so far from being contrary to special truth, is the very abstraction of specialty from everything else. It is the earnest statement of the characters which make man man, and cockle cockle, and flesh flesh, and fish fish. Feeble thinkers, indeed, always suppose that distinction of kind involves meanness of style; but the meanness is in the treatment, not in the distinction. There is a noble way of carving a man, and a mean one; and there is a noble way of carving a beetle, and a mean one; and a great sculptor carves his scarabaeus grandly, as he carves his king, while a mean sculptor makes vermin of both. And it is a sorrowful truth, yet a sublime one, that this greatness of treatment cannot be taught by talking about it. No, nor even by enforced imi-
