THE AUTHOR.

P R E F A C E .

THE purpose of this little treatise is to bring together, in a convenient form, all the information I could obtain relative to a subject which has of late years engrossed so large a share of the attention, not only of the medical profession, but of scientific men generally, in all parts of the world—the localization of speech, and the causes which interfere with the proper manifestation of that faculty.

The different parts of this essay have already appeared, at certain intervals, in the pages of the *Journal of Mental Science*, and it is in deference to the opinion of those whose judgment I am bound to respect, that I now venture to publish them in a collected form.

If I have failed to contribute anything towards bridging the chasm which separates matter from mind, my researches will, at all events, tend to shew how little we really know about that wonderful piece of mechanism—the human brain.

FREDERIC BATEMAN.

Norwich, May, 1870.

CONTENTS.

PART I.

Bibliography. Hippocrates; Sauvages. Description of the disposition and arrangement of the cerebral convolutions. Writers of the French School—Bouillaud; Andral; Drs. M. and G. Dax; Professor Broca, his <i>ne plus ultra</i> of pathological topography, summary of his two primitive and typical cases; Jules Falret; Trousseau. The celebrated discussion at the Academy of Medicine of Paris; case of M. Velpeau's barber; divers observations from the French press. Ladame's statistics of tumours of the brain, opposed to the localisation of speech in the anterior lobes	PAGE 1
--	-----------

PART II.

Bibliography continued. Schroeder van der Kolk. German writers—Romberg; Bergmann; Hasbach; Nasse; Von Benedikt and Braunwart. English, Scotch, Irish, and American contributions to the literature of Aphasia	23
---	----

PART III.

Author's own clinical experience—Volumetric Analysis of the urine in cerebral disease. Aphasia of the ataxic form, occurring as the earliest indication of disease; curious chain of morbid symptoms, eventually merging into general paralysis. Question of the testamentary capacity of aphasics—M. Legrand du Saulla. Three cases of aphasia in which the autopsy revealed a healthy condition of the frontal convolutions. Importance of examining the condition of the bones of the skull, in the autopsies of patients who during life had exhibited symptoms of impaired speech. Loss of Speech with Paraplegia; Spinal Symptoms. Ataxic Aphasia as a Chimacteric
