DEDICATION

*Then here's to those who love the Stars
And diligently tea them,
And here's to all Ambitious Souls
Who strongly strive to be them;
But most to those Discerning Ones
Who know Stars when they see them.*

RECORD OF STARS OBSERVED DURING JANUARY

Operatic Stars

Dramatic Stars

Social and Literary Stars

THE HEAVENS IN JANUARY

IN THE early part of the month the Constellation of the water-wagon is on the meridian. The *Bowl Star* which during the last month was in full view to the naked eye, and the most prominent object in the midnight sky, has on the first of the month disappeared, apparently absorbed by a dim nebula composed of countless hazy and rapidly Resolving stars of the third and fourth Magnumtude, and known as the *Pledgides*.
