### Innehåll:

<b>Lindberg, S. O.</b>	Musci nonnulli scandinavici . . . . .	Sid. 1.
<b>Karsten, P. A.</b>	Symbolae ad Mycologiam fennicam, VI . . . . .	» 15.
»	Pyrenomycetes aliquot novi . . . . .	» 47.
»	Quaedam ad Mycologiam addenda . . . . .	» 52.
	Skifflingar, iaktagna i Mustiala trakten den 3 November 1878 . . . . .	» 57.
<b>Brenner, M.</b>	Berättelse till Societas pro Fauna et Flora fennica öfver en 1869 i Kajana och Norra Österbotten verkställd botanisk resa . . . . .	» 69.
<b>Leopold, C.</b>	Anteckningar öfver vegetationen i Sahalahti, Kuhmalahdi och Luopiois kapeller af Södra Tavastland . . . . .	» 81.
<b>Hellström, Fr.</b>	Förteckning öfver i Gamlakarleby provinsallikare-distrikt funna Fröväxter och Ormbunkar . . . . .	» 131.
<b>Reuter, O. M.</b>	Nya bidrag till Ålands och Åbo skärgårds Hemipter-fauna . . . . .	» 160.
<b>Selän, Th.</b>	Om de i Finland förekommande formerna af släktet <i>Tilia</i> . . . . .	» 237.
»	Om det Sibiriska Lärkrädet . . . . .	» 246.
»	Beskrifning öfver <i>Impatiens parviflora</i> DC. . . . .	» 249.
»	Några sällsynta växter observerade under en excursion till Sörnäs lastageplats vid Helsingfors i början af Oktober 1878 . . . . .	» 251.

## MUSCI NONNULLI SCANDINAVICI

DESCRIPTI

A

S. O. LINDBERG.

(Societati exhibitum die 8 Novembris 1879.)

### 1. *Seligeria subimmersa* Lindb.

*Autoica*, densissime et pulvinate caespitosa; *caulis* dichotomus; *folia* nigra, fragilia, e basi elliptica vel oblonga fere sensim subulata, obtusiuscula, cellulis angularibus numerosis, magnis, rufo-brunneolis; *bractee* perichaetii grandes, os thecae plus minusve attingentes; *seta* brevis, crassa, lenissime curvatula; *theca* elliptica, collo magno; *dentes* acuti, extus optime cristato-trabeculati; *operculum* maximum, longitudine fere tota thecae, oblique rostratum.

Fennia, prov. Kuusamo, in rupe ad Kitkajoki, 66° 20' lat. bor., Aug. 19, 1867 parcissima specimina detexit amic.

**Fr. Silén.**

*Caespites* ad 1 cm. alti, densissimi, pulvinati, nigri, solis apicibus summis luteolo-viridibus, subopaci. *Caulis* flexuosulus, dichotomus, densissime foliatus. *Folia* sicca irregulariter curvata, accrescentia, infima minima, sat fragilia, e basi erecta patentia, inferne elliptica vel oblonga, fere sensim subulata, subula flexuosula et superne distincte incurvatula, basi carinato-canaliculata, subula tamen canaliculata, margine plano

et integerrimo, nervo inferne sat angusto et bene effigurato, superne sensim magis magisque latiore, crassiore et non effigurato, partem superiorem subulae solo formante, apice summo obtusiusculo et plano-convexo; *cellulae* omnes laevissimae, angulares numerosae et magnae, haud incrassatae, rufo-brunneolae (h. e. perfecte dieranaceae), in strato singulo, supra-basilares subquadratae, minutae, bene incrassatae, eadem in subula minutissimae et quadratae. *Bractee perichaetii* numerosae, multo majores, accrescentes, os thecae plus minusve attingentes, e basi alte convolutaceo-vaginate et erecta abrupte subulatae, inferne laxissime et brunneolo-, superne incrassate et viridi-areolatae, subula angustiore magisque a nervo formata. *Vaginula* oblonga, laxo texta, a tribus vel quatuor pistillidiis et paraphysibus filiformibus circumdata. *Seta* 1—1,5 mm. alta, crassa, erecta, lenissime tamen curvatula, straminea, laevissima. *Theca* 0,5 mm. alta, opaca, luteo-viridis, ore rubella, elliptica, sicca sub ore sat magno leniter contracta, laevissima, collo fere dimidium thecae longo, ex ipsa theca nullo modo, sed e seta bene definito, plicato, stomata paucissima superficialia in jugis gerente, cellulae exothecii magnae, valde irregulariter rectangulares, parum incrassatae. *Annulus* nullus. *Peristomii* dentes sedecim, purpureo-rufi, dolabriformes, acuti, incurvi, sicci optime reflexi, laevissimi, circiter decem-articulati, et extus altissime cristato-trabeculati. *Columella* crassissima. *Spori* minutissimi, flaviduli, hyalini, laevissimi. *Operculum* maximum, longitudine fere tota thecae, rufum, nitidum, semigloboso-conicum, abrupte rostratum, rostro obliquo et acutiusculo. *Calyptra* magna, cucullata, inferne lutea, medio aurea, apice brunneola, laevissima, nitida. — *Androecium* apicale in ramo, e cujus axilla ramulus femineus postea exit, fuscum, minutum, gemmaeum; *bractee* tres, convolutae, cochleari-concavae, rotundae et breviter

triangulari-acutatae, obtusiusculae, integerrimae, nervo tenui, bene effigurato, fere continuo, cellulae magnae, subrectangulares, laxissimae, summis distincte incrassatis exceptis; *antheridia* circiter sex, magna, duas partes bractearum alta, oblonga, aetate brunnescentia, brevissime stipitata, paraphyses ejusdem numero, filiformes, multiarticulatae, antheridia parum superantes.

E proxima spitsbergensi *S. polari* Berggr. pulcherrime distincta his notis: planta omnibus partibus multo minor, theca valde breviseta et inter bracteas fere immersa, elliptica etc. E *S. setacea* (Dill.; Wulf.) Lindb. jam caespite alto et denso et caule dichotomo-ramoso differt.

E ceteris speciebus generis distinguuntur hae *S. polaris* et *subimmersa* caespite alte pulvinate et deo cauleque dense ramoso, cellulis angularibus foliorum vere dioranaceis, quibus notis se ad *Blindiam* valde appropinquant, ex hoc genere certe distinctae vix alia nota quam dentibus extus dense cristato-trabeculatis, et novum subgenus *Seligeriae*, quod *Blindiadelphum* nominare volumus, constituentes; naturalius forsitan videatur *Blindiam* cum *Seligeria* conjungi, qua de re tamen nondum perfecte certi sumus.

Denominationes antiquissimae *S. setaceae* sunt, secundum specimina archetypa in herb. Dillenii; *Muscus trichoides omnium minimus palustris, capitulis plurimis acutis* vel *Muscus capillaris omnium minimus palustris serotinus, capitulis plurimis acutis, visum ferme fugiculibus* Richards. Mss. (Mart. 1722); *Bryum trichoides acaulon palustre minimum, setis et capsulis brevissimis* Dill. Hist. musc., p. 387, n. 53, tab. 49, fig. 53 (1741); *Bryum paludosum* L. Sp. pl., 1 ed., 2, p. 1119, n. 20 (1753)!

## 2. *Hypnum (Brachythecium) latifolium* Lindb.

*Dioica*, nitida, recta apiceque acutissima — acuta, irregulariter remoteque subpinnata — subsimplex, ramis brevi-
