## PREFACE

This laboratory manual has been designed primarily for use in the author's classes in the University of Wisconsin, and embodies the notes originally prepared by C. F. Burgess, former head of the Chemical Engineering department of the University, together with many new experiments and much additional material. It is hoped that it may prove a useful handbook in applied electrochemical courses elsewhere than at Wisconsin.

Thanks are due to Mr. C. F. Burgess for the use of his notes, and to Mr. Claude N. Hitchcock for the drawings which illustrate the text, and for the use of figures 13, 14 and 15, which were originally published in his paper upon Polarization Single Potentials (vol. 25, Transactions of American Electrochemical Society).

O. P. W.

Sept., 1914.
