INTRODUCTION.

As the author is so well known to American sportsmen through his contributions to the *American Field*, it is not necessary that I should commend the book to their consideration.

Being in favor of educating that portion of the public who are not sportsmen to the importance of healthy outdoor sports as the surest and best method of securing and maintaining good health, and believing that sketches such as this book contains contribute most forcibly to this end, by creating a desire to participate in such scenes and pleasures as they recount, it is, therefore, to the general reader that I commend this book.

Not physically only, but mentally also, are outdoor sports invigorating ; and rapidly are the people realizing what the greatest savans have long since realized : *mens sana in corpore sano*.

Satisfied that the protection and propagation of game birds, game animals and game fishes, apart from an economic point of view, demand the attention of the people as affording the facilities for the maintenance of health and repairing overworked bodies and brains, I look upon a book like this, which treats of the pleasures of the gun, rifle or rod in a most entertaining manner, as a missionary sent out to en-

lighten a people on the healthful recreation they know not of, and enlist them in the protection of game and fish which unwittingly they may have been aiding the destruction of.

The author has had the experience necessary to furnish material for interesting sketches; and being an ardent advocate of the protection of game and fish during the close season, and opposed to the wanton slaughter of them during the open season, I again commend this book.
