SYPHILITIC OSTEITIS  
AND  
PERIOSTITIS.

BY  
JOHN HAMILTON,  
SURGEON TO THE RICHMOND HOSPITAL,  
AND TO SWIFT'S HOSPITAL FOR LUNATICS;  
LATE PRESIDENT OF THE PATHOLOGICAL SOCIETY OF DUBLIN.

LONDON:  
J. & J. CHURCHILL, NEW BURLINGTON-STREET.  
DUBLIN: FANNIN & CO., GRAFTON-STREET.

1874.

160. e. 123.

1. The first part of the document discusses the importance of maintaining accurate records of all transactions and activities. It emphasizes that this is crucial for ensuring transparency and accountability in the organization's operations.

2. The second part outlines the various methods and tools used to collect and analyze data. This includes the use of surveys, interviews, and focus groups to gather insights from stakeholders. The analysis of this data is then used to identify trends and areas for improvement.

3. The third part of the document focuses on the implementation of strategies and initiatives. It details the steps involved in developing a plan, allocating resources, and monitoring progress. This section also discusses the challenges that may arise and how they can be effectively managed.

4. The final part of the document provides a summary of the key findings and conclusions. It highlights the overall impact of the research and the recommendations for future work. This section serves as a valuable reference for decision-makers within the organization.

5. The document concludes with a list of references and a bibliography, providing sources for further reading and research. This ensures that the information presented is based on credible and up-to-date data.

## LECTURE I.

### *Syphilitic Osteitis and Periostitis.*

THE syphilitic poison affects the periosteum and bones; either as an early or a late symptom. Disease in these structures is met with in three forms:—First, Periostitis; second, Bony Node; third, Soft Node. Other secondary symptoms, eruptions, ulcers of the throat, or of the tongue, &c., usually accompany these affections, but they are sometimes solitary. When they occur very late, that is, many years after infection, they are frequently the only symptom.

First, Periostitis.—From the intimate connexion between the periosteum and bone, it may be doubted whether the former can ever be diseased without the latter partaking of the morbid action. Certainly the patient will complain of pain and tenderness over a bone, as the tibia or clavicle, without there being any apparent swelling; and in the absence of any
